

NEW PROPOSAL

Title: Herbicide Resistance Management Bulletin

Personnel: Carol Mallory-Smith
Robert Zemetra

Funding Request: \$8,000

Timeline: Final Draft March 2009

Summary of Proposal:

A bulletin on herbicide resistance management for jointed goatgrass will be produced. The bulletin will address the general principles of resistance management with a focus on jointed goatgrass, selection of resistant populations especially with the high risk herbicides such as imazamox, and gene flow implications from Clearfield wheat or other herbicide resistant wheats that may be developed in the future.

The bulletin will use data and examples from the long term studies to address selection pressure and the best management practices to delay resistance.
