

# B&W Rockstar Presets for Adobe Lightroom (4 and above)

# Installation

Requires Lightroom 4 and above.  
PC & MAC compatible.

Hi and thank you for downloading my Lightroom Presets! Make your RAW files kick ass with just one click!

## Installing the Presets:

1. Unzip the preset .zip file on your desktop
2. Copy the preset folder to your „Develop Presets“ folder:

**MAC OSX:** Library/Application Support/Adobe/Lightroom/Develop Presets

**MAC OSX Mavericks (and newer):** go to Finder/Go/hold the alt key and click Library/Application Support/Adobe/Lightroom/Develop Presets

**WIN XP:** C:\Documents and Settings\Application Data\Adobe Lightroom\Develop Presets

**WIN VISTA & WIN 7:** /AppData/Roaming/Adobe/Lightroom/DevelopPresets

3. Restart Lightroom. Boom. Done. You'll find the presets in the develop module of Lightroom on the left hand side in the Presets box with the proper names.

# How to use my Presets

My Black and White Rockstar LR presets should be your quick solution to get your red/green/blue concert photos look awesome again. Because of the different lighting conditions on stage and the various camera settings my presets will provide you with a good starting point. Most of the time you'll find yourself by just using the preset and nothing else. Sometimes you have to tweak other settings a little bit.

## General Tips:

- If your concert photos are overexposed and you see almost no blacks (have a look if you have a spike on the left hand side of the histogram) pull the „Blacks“ slider to the left.
- If your concert photos are overexposed and you see a spike on the far right hand side of your histogram, pull the „Highlights“ slider to the left to recover blown out highlights.

## Advanced Tip:

- Use the „ToneCurve“ to adjust „Highlights“, „Lights“, „Darks“, and „Shadows“ manually.

# What I want you to do

I would love to see your black and white concert photos using my Lightroom presets!

Choose the preset you like most and post your photo in the comment section of my Blog post here:
