

MAXGXL™

UNIQUE NAC FORMULA

Purpose

MaxGXL's exclusive NAC formula gives your body the support it needs to enhance the natural production of glutathione.

Positioning Statement

MaxGXL® is an exclusive blend of ingredients designed to promote an increase in glutathione production within the body in order to improve the quality of life for people of all ages.

General Description

What is glutathione and why is it so important? Glutathione is a small tri-peptide produced naturally in our cells. It functions both as an antioxidant and an anti-toxin. Our glutathione level actually is closely related to our overall state of health and wellness.

Beginning around the age of 20 your body's natural production of this powerful little tri-peptide declines about 10 to 15 percent every decade. Various daily impacts such as stress, exercise, infection, injury and environmental toxins also reduce your glutathione levels over time.

So how do we help our body get the glutathione it needs? Eating enough glutathione enhancing foods only works in an idealized world where stress, deadlines and fast food are not factors. Orally supplementing glutathione is a good idea, but just not practical. The fragile structure of glutathione makes surviving the digestive tract nearly impossible. Science has struggled for decades to find a practical way of getting this vital component to your cells until now.

Until now, MaxGXL contains a proprietary NAC formula that is designed specifically to provide your body with one of the fundamental building blocks it needs to produce optimal amounts of glutathione. It not only contains this specific building block of glutathione, but also key nutrients that aid in absorption of these building blocks into the body.

Unique Attributes

- 1-Exclusive formula proven promote the production of glutathione within the body.
- 2-Provides essential nutrients that enable absorption of the critical glutathione forming components*.
- 3-Max International® is the proven leader in glutathione research, development and distribution. Our sole product focus is to optimize glutathione production within the body*.

Product Benefits

Unique NAC formula designed to assist your glutathione network.

Supporting Ingredients

N-Acetyl Cysteine (NAC)- supports the transport of a very fragile amino acid, L-cysteine through the digestive process making it more bio-available for glutathione production. Cysteine is known as the "rate limiting amino acid" for the production of glutathione and is one of the core ingredients in MaxGXL together with L-glutamine, another glutathione amino acid precursor. In addition, other network antioxidants such as vitamin C and alpha lipoic acid, as well as a dietary flavonoid, quercetin, have been added to provide complementary antioxidant support.

Cordyceps sinensis- has been used as a Chinese medicine for centuries and has been valued for its activity in restoring energy, increasing stamina, promoting longevity and improving quality of life.

N-Acetyl-D-glucosamine- supports the gastrointestinal absorption of amino acids. It is included in the formula to promote the absorption of N-Acetyl Cysteine and glutamine.

Glutamine- L-Glutamine is one of the three amino acids that makes up the tripeptide glutathione. Additionally, L-glutamine is known as an essential nutrient to the cells that line the small intestine.

Silymarin- is the active extract from milk thistle comprised of a complex of seven flavonolignans and polyphenols with antioxidant properties. It also works to preserve hepatic glutathione to support a healthy liver.

FAQs

What makes MaxGXL Unique?

A-MaxGXL uses the highest quality ingredients from proprietary sources. The careful selection of each raw material and the unsurpassed analysis and production of the MaxGXL formula is a highly guarded trade secret owned exclusively by Max International.

How does MaxGXL increase glutathione in the body?

A-MaxGXL helps to provide an essential building block for glutathione so that your body can manufacture it naturally in the cell.

What are free radicals and why are they dangerous?

A-Free radicals are highly reactive compounds that are created in our body due to a number of different causes such as diet, exercise, pollutants in the air or in our food, physical stress, and more. Free radicals are neutralized by antioxidants, with glutathione being the most important and powerful antioxidant. When the number of free radicals exceeds the ability of antioxidants to neutralize them, your body enters a state referred to as “oxidative stress.”

How is MaxGXL different from MaxOne and Cellgevity?

A-MaxGXL uses a unique NAC-based formula to assist your body in raising glutathione levels. MaxOne and Cellgevity utilize Max International’s proprietary RiboCeine™ formulation, which Dr. Herb Nagasawa developed based on 25 years of research. While both products are designed for effective glutathione supplementation, their unique means may produce different results for different people.
