Mushroom Networks Selected as a Winner of CONNECT's 28th Annual Most Innovative New Product Awards

Award Recognizes the Innovative VoIP Armor™ which routes VoIP traffic around network problems for Improved VoIP Call Reliability and Redundancy

SAN DIEGO, CA - (December 16, 2015) – Mushroom Networks, Inc., innovators of Broadband Bonding™ technology, announced today that its innovative VoIP Armor™ solution has been selected as the winner in the Communications & IT Category at CONNECT's 28th Annual Most Innovative New Product Awards.

CONNECT, a premier innovation company accelerator in San Diego that creates and scales great companies in the technology and life sciences sectors, annually hosts this prestigious competition, which begins in each year in the spring and culminates in the awards ceremony in December, to recognize and laud groundbreaking products released within the last 18 months from San Diego-based innovation companies.

VoIP Armor is available as an appliance or as a module for Mushroom Networks' patented, Truffle Broadband Bonding devices, which help companies manage multiple internet access lines through aggregation and smart WAN orchestration. VoIP Armor helps prevent the voice quality and reliability issues persistent with VoIP calls by shielding the traffic against link failures or fluctuations in link performance. It creates self-healing WAN networks that can route around network problems in real-time to shield calls from disconnects, latency spikes, and packet loss.

"We are thrilled to earn this recognition from CONNECT for our VoIP Armor solution," said Cahit Akin, CEO of Mushroom Networks. "Companies want to leverage the cost savings and convenience of VoIP calling, but are frustrated by the reliability and quality concerns. There is no reason why voice can't be 100 percent IP based with no compromises. We've tackled this problem head on with VoIP Armor for unbreakable VoIP call capabilities."
