

## Overview

Public sector organizations are increasingly adopting automation to improve operational efficiency, reduce costs, and enhance service delivery. However, many agencies struggle to scale automation programs due to platform complexity, rapidly evolving UiPath capabilities, and limited internal resources to operate and maintain automation environments.

Through the NASPO ValuePoint Cloud Solutions portfolio, CGI offers Accel360, a comprehensive UiPath Managed Service delivered through CGI-hosted or hybrid cloud environments. Accel360 provides the platform, infrastructure, and end-to-end services required to deploy, operate, and scale enterprise automation in a secure and compliant manner.

## CGI Accel360

CGI Accel360 is a subscription-based managed service that includes the UiPath platform, CGI-managed hosting and security infrastructure, and full lifecycle automation services. The solution is primarily delivered through CGI-hosted or hybrid cloud models, reducing the need for agencies to manage infrastructure internally.

### CGI Accel360: UiPath Managed Services

Organizations struggle to scale automation due to **platform complexity**, **rapidly evolving UiPath capabilities**, and the need to support a **broad spectrum of technologies from RPA to agentic automation**.

**CGI Accel360 delivers the full UiPath platform as a managed service**, enabling clients to **rapidly adopt, scale, and operationalize UiPath** without managing **infrastructure, tools, or specialized skills**.

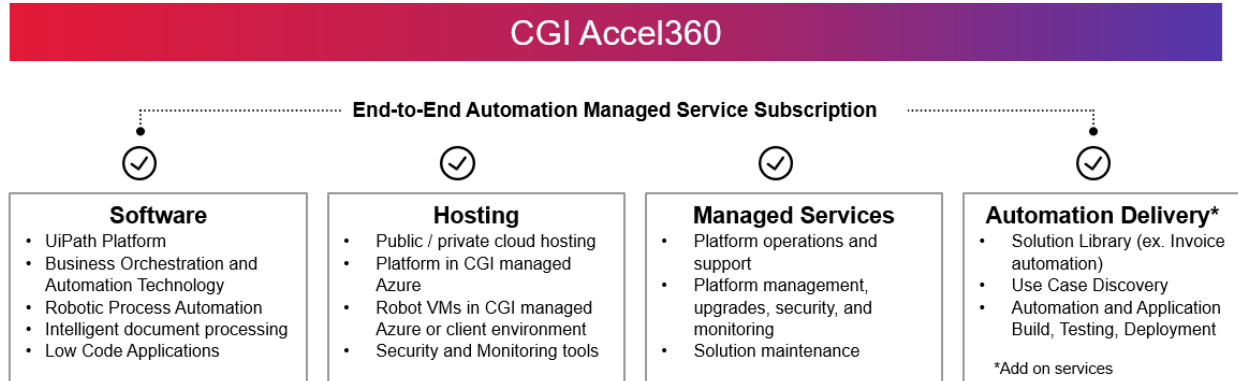

- ✓ **End-to-End Managed Service**  
CGI owns platform hosting, support, and automation delivery lifecycle
- ✓ **Flexible Deployment Models**  
CGI-hosted or hybrid.
- ✓ **Global Delivery at Scale**  
Local, onshore, nearshore, and offshore delivery aligned for scale and efficiency
- ✓ **Industry Accelerators**  
Pre-built solutions and reusable assets to accelerate time to value

→ From platform to outcomes, CGI managed services drives UiPath agentic automation at enterprise scale.

Accel360 provides a single point of accountability for automation software, infrastructure, and services, minimizing vendor coordination and reducing operational risk.

## Exhibit 1: CGI Accel360

Accel360 is built on the UiPath enterprise automation platform and deployed within secure CGI-managed cloud environments or hybrid configurations that integrate with client systems.

Key components include UiPath Orchestrator for centralized control, unattended and attended robots, secure integration with agency systems, and monitoring and analytics capabilities for performance management.

CGI is responsible for infrastructure provisioning, environment management, platform upgrades, and performance optimization, ensuring a stable and scalable automation environment.

## Managed Services and Operations

Accel360 delivers a fully managed service model including intake and pipeline management, design and development, testing and deployment, and ongoing support.

CGI provides flexible monitoring, incident management, and solution support, along with continuous optimization to improve performance and reliability.

## Security and Compliance

Accel360 environments are designed to align with public sector security and compliance requirements, including NIST-based frameworks and secure cloud practices.

Security capabilities include role-based access controls, encryption, network security, and full audit logging, all managed within CGI-controlled environments.

## Key Benefits for Government Clients

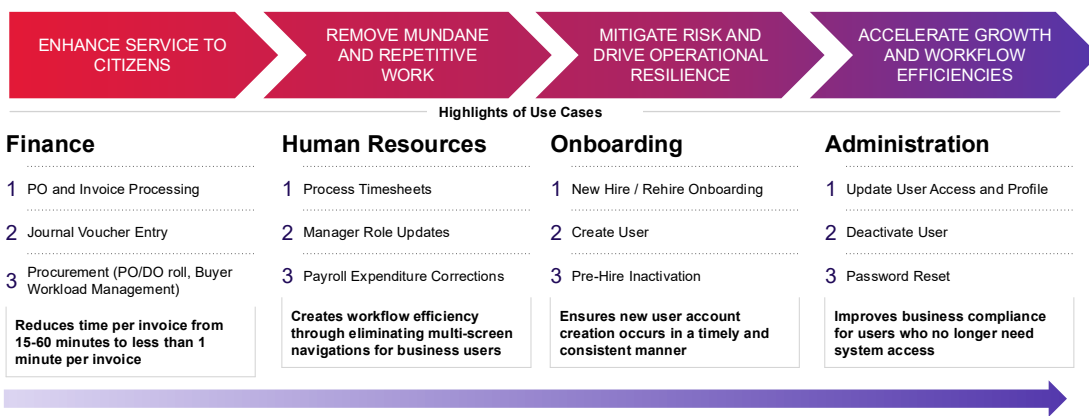

- Single Accountability and Reduced Risk through CGI-managed platform and infrastructure
- Reduced Operational Burden by eliminating the need to manage automation infrastructure
- Lower and Predictable Total Cost of Ownership through subscription pricing
- Accelerated Time to Value using pre-configured environments and reusable assets
- Secure and Scalable Cloud-Based Automation aligned to government requirements

## Key Benefits for CGI Advantage Clients

CGI has built a full suite of automations across finance and human resources. These optional solutions accelerate time to value for the business. Below is a sample set of solutions available. Other Advantage based solutions can be built rapidly with a prebuilt adapter for all CGI Advantage Connect APIs. Accel360 can extend beyond Advantage to other processes and systems.

### CGI Accel360 Automations for CGI Advantage ERP

CGI Advantage UiPath Library provides prebuilt connectors accelerating automation of any business process on CGI Advantage. Create and Update ANY Advantage transaction.

## Why CGI

Founded in 1976, CGI has grown to become one of the largest independent IT and business process services companies in the world with over 90,000 professionals spanning 400 locations across 40 countries servicing 5,000 clients across the globe.

CGI brings extensive experience delivering managed services and cloud-based solutions for government clients, with a focus on security, reliability, and performance.

By combining platform management, hosting, and automation services, CGI provides a fully integrated solution that reduces complexity and improves outcomes.

CGI Accel360 enables government agencies to scale automation through CGI-hosted and hybrid managed service models, reducing infrastructure complexity, lowering risk, and improving operational efficiency.
