Objectives

- Interprofessional education (IPE) experiences are a vital component of health care professional student training
- IPE aids in transforming student learners into high-functioning professionals with strong communication and team building skills
- Professional school accreditation councils have mandated IPE to be incorporated into the didactic curriculum, requiring institutions to become more innovative in the design and delivery of the core curricular content
- Our team created a simulation for early learners in Medicine, Pharmacy, Nursing and Physician Assistant Studies that allows students to observe each other’s methods for history taking and challenges teams to create an informed and high-quality joint patient care plan after receiving different information from a standardized patient

Conclusions

- Participation in the simulation contributed to several enhanced positive perceptions related to a team approach to healthcare
- The least growth was reported in speaking out when students felt the best interest of the patient/client is not being represented

Methodology

- 139 students were divided between two campuses to accommodate the number of participants. Each group participated in an icebreaker, a 50-minute patient care simulation, and a large group debrief

  - **-10 Minutes-**
    - Pharmacy student meets standardized patient in out-patient setting
    - RN/PA/MD students attend presentation with Pharmacist

  - **-5 Minutes-**
    - Pharmacy student performs a handoff to the RN or PA student

  - **-10 Minutes -**
    - RN or PA student obtains a focused history from the patient, now in an in-patient facility setting
    - Pharmacy student observe

  - **-10 Minutes-**
    - MD student obtains a focused history from the patient
    - RN and PA students observe

  - **-15 Minutes-**
    - All students (MD, Pharm, RN, & PA) come together for an interprofessional care round to create a patient plan, and deliver back to the patient as a team

  - **-30 Minutes-**
    - Large group debrief led by interprofessional faculty team

Results

- 61 students completed the 9-Item Interprofessional Socialization and Valuing Scale as an evaluation
