

## Studying Common Body Parts: Learning by Labelling

Labeling is a fun and easy way for students to learn keywords in any subject from Biology to Social Studies. Karen DeCarolis, Crescent Park Elementary, Bethel, ME.

### Outline of the Class

I found a pdf file of an open mouth ready to receive **body part labels** for the various teeth and tongue body parts, and uploaded it to my LoiLoNote School account on my desktop. I put the image into the science folder of my Materials Box which I can also access on my iPad.

I “pushed” this to the children, and we spent a session working on labeling the various teeth, tongue, uvula, and lips. Each child was able to do their own work on their own iPad, and we **shared and compared our results**. They loved doing this, and learned a great deal.

So, when we moved on to the systems of the body, I found a **skeleton** pdf file awaiting labels, and repeated the task. We worked on the skeleton for several sessions. Now we are working on labelling the **chambers of the heart** in the same way!

### Teacher Point of View

I am finding I can use the same technique in **Social Studies** for labeling direction points on a compass rose, continents and oceans on a world map, or areas of interest on our state map. I find that I often ask myself, “Would this item be better as a paper worksheet, or as an activity we can do together as a LoiLoNote School pdf?” In many cases, the answer is LoiLoNote School.
