

OptixPLOT Adds New Visualization Tool QuadSTAT Treemap

1 TAM_D_8.18f Tampa Bay Downs Dirt Race 1m 40yards (Track/Surface/Distance)

2 WinPCT Win percentage for each circle and square in all 4 quadrants (8 in total) for this track/surface/distance over history

3 q1sqWP q1 = Quadrant 1, sq = Square, WP = Win

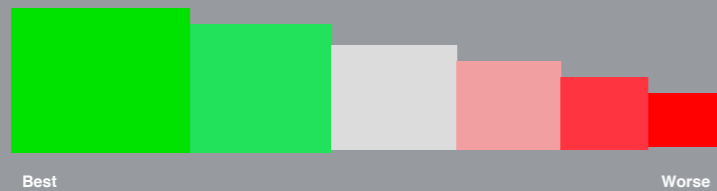

q2crWP q2 = Quadrant 2, cr = Circle, WP = Win

q2crROI q2 = Quadrant 2, cr = Circle, ROI = Return on \$1

4 Hover-over for Q1 region shows the actual win%, number of wins and total count for Q1 squares at this track/surface/distance

5 Measures circle/square/quadrant history for Standard PLOT or SurfaceDistance PLOT filter

6 WinPCT Size and color reflect the relative Win% (big and green is better than small and red)

7 ROI color reflects the relative ROI (green is better than red). Size reflects the relative magnitude of the loss or gain (i.e. Typically -.30 will be big and red while +.03 will be small and green)
