

BIOE.44

Synthetic Biology Lab

8 April 2010 Lecture / Discussion notes

<http://openwetware.org/wiki/Stanford/BIOE44>

Today's take aways:

1. Features of BB_AS#10

2. Problems with BB_AS#10

3. Which standard should you use?

4. Your questions (controls, strains, induction, repressors, anything)

1. Features:

1. Works

2. Idempotent

3. Used widely

4. Geometric assembly

Welcome to the Registry of Standard Biological Parts.

The Registry is a **continuously growing** collection of genetic parts that can be mixed and matched to build synthetic biology devices and systems. Founded in 2003 at MIT, the Registry is part of the Synthetic Biology community's efforts to make biology easier to engineer. It provides a resource of available genetic parts to **iGEM** teams and academic labs.

The Registry is based on the principle of "get some, give some". Registry users benefit from using the parts and information available from the Registry in designing their engineered biological systems. In exchange, the expectation is that Registry users will, in turn, contribute back information and data on existing parts and new parts that they make to grow and improve this community resource.

Registry tools

- [Search parts \(?\)](#)
- [Add a part](#)
- [Request a part](#)
- [Send parts to the Registry](#)
- [Sequence analysis](#)

You'll notice some significant changes to the Registry recently. In particular, the Registry [catalog of parts](#) has been entirely redesigned to allow for easier browsing of the available parts and devices. You can now browse parts and devices by type, by function, by chassis and by standard. You'll also notice that the documentation and help pages for each class of parts have been greatly enhanced.

The Registry of Standard Biological Parts is **always** a work in progress. Please browse the new catalog and let us know what you think, or feel free to edit and improve the pages further.

Registry news

- **June 22, 2009:** You can now link to part pages directly from the iGEM wiki by typing the following `<partinfo>BBa_B0015</partinfo>`.
- **June 11, 2009:** We are considering changing the license terms of the Registry so that we can share our information with other databases. Go [here](#) to read the proposal or add your comments.

SynBERC Statistics Snapshot

Interesting statistics about the parts from SynBERC Labs and affiliated iGEM Teams

Total parts	11393
Total synberc parts	3062
Total synberc parts used	1046
Total usage of synberc parts	24349

Lab or Team	Total Parts	Parts Used	Total Uses
Endy Lab	714	318	6730
Knight Lab	611	182	2173
Prather Lab	8	5	1490
Arkin Lab	111	24	126
Keasling Lab	10	0	0

*let's take a look
(distribution)*

2. Bugs

1. Doesn't support re-work

2. Protein fusions???? (no)

3. Physical composition only (will it function?)

4. Geometric < Parallel

Linear: $(N-1)$ steps

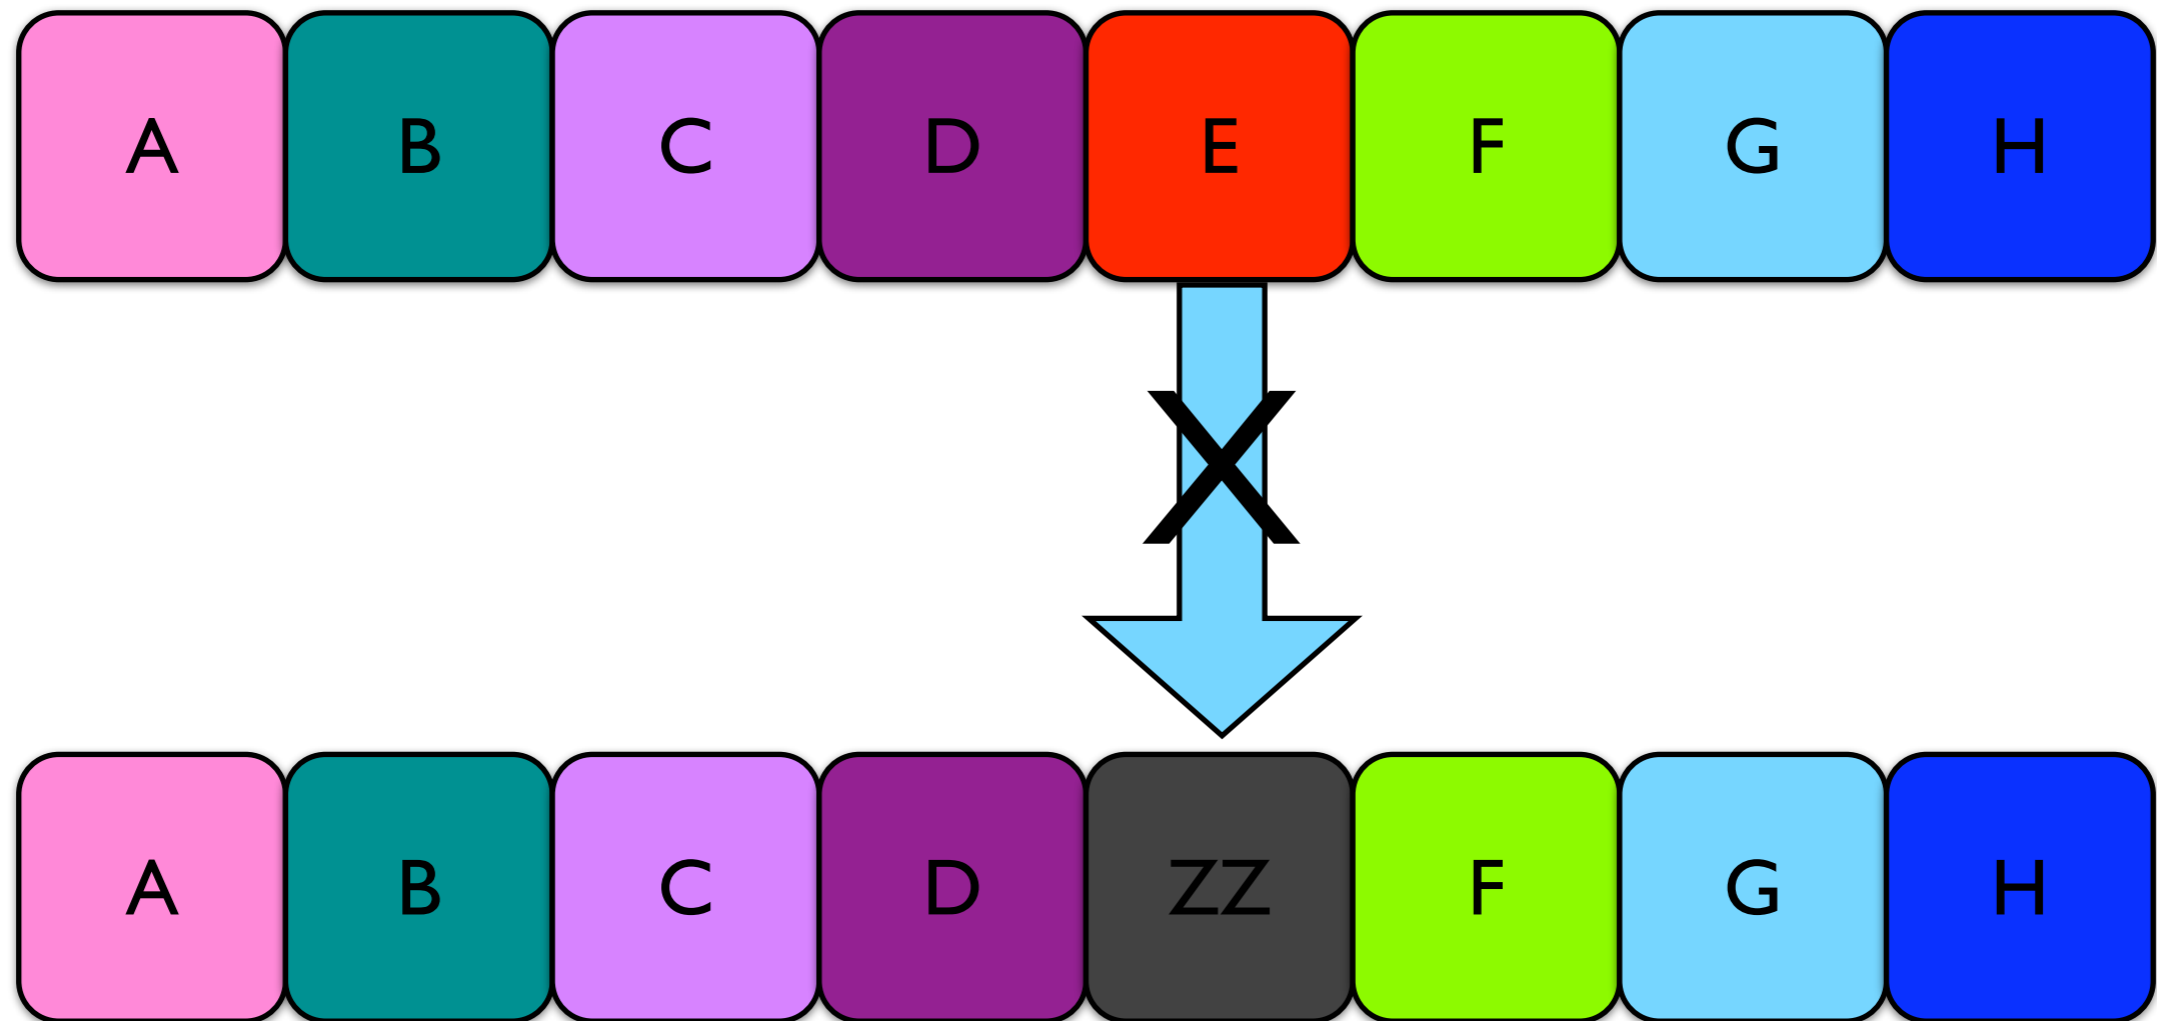

Parallel: Single step

Geometric: $(\log_2(N))$ steps

No support for rework:

(would need to make ZZ:F, and then ZZ:F:G:H, and then ABCDZZFGH).

**So, the first standard
isn't perfect.**

What do you do?

Develop improved standards!

[Catalog#Browse_parts_and_devices_by_standard](#)

**You are going to make a new
standard biological part soon.**

**Which assembly standard
should you use, if any?**

Significance:

Imagine a future in which you can call any needed genetic function “off the shelf,” and it works, at the scale of 1000s of functions (i.e., genomes)

Your questions:

LacI

Inducer

RPU

Strains
