

*Cooper & Hausman, "The Cell – A Molecular Approach", 4ª edição*

## **PARTE I: Introduction**

### **Cap. 1: An Overview of Cells and Cell Research**

The Origin and Evolution of Cells (pgs 4-15)

Cells as Experimental Models (pgs 16-21)

Molecular Medicine: Viruses and Cancer (pg 37)

### **Cap. 2: The Composition of Cells**

The Molecules of Cells (pgs 43-57)

### **Cap. 4: Fundamentals of Molecular Biology**

Heredity, Genes and DNA (pgs 103-110)

Expression of Genetic Information (pgs 111-117)

Recombinant DNA (pgs 118-128)

Detection of Nucleic Acids and Proteins (pgs 129-136)

Gene Function in Eukaryotes (pgs 137-146)

Key Experiment: The DNA Provirus Hypothesis (pg 116)

Molecular Medicine: HIV and AIDS (pg 120)

## **PARTE II: The Flow of Genetic Information**

### **Cap. 5: The Organization and Sequence of Cellular Genomes -**

The Complexity of Eukaryotic Genomes (pgs 155-165)

Chromosomes and Chromatin (pgs 166-175)

The Sequences of Complete Genomes (pgs 176-191)

Bioinformatics and Systems Biology (pgs 192-195)

Key Experiment: The Discovery of Introns (pg 158)

Key Experiment: The Human Genome (pg 188)

### **Cap. 6: Replication, Maintenance, and Rearrangements of Genomic DNA**

DNA Replication (pgs 201-211)

DNA Rearrangements (pgs 233 e 239-247)

### **Cap. 7: RNA Synthesis and Processing**

Transcription in Prokaryotes (pgs 254-262)

Eukaryotic RNA Polymerases and General Transcription Factors (pgs 262-267)

Regulation of Transcription in Eukaryotes (pgs 268-287)

RNA processing and Turnover (pgs 290-303)

Key Experiment: Isolation of a Eukaryotic Transcription Factor (pg 276)

Key Experiment: The Discovery of snRNPs (pg 294)

### **Cap. 8: Protein Synthesis, Processing and Regulation**

Translation of mRNA (pgs 309-328)

Key Experiment: Catalytic Role of Ribosomal RNA (pg 316)

Molecular Medicine: Antibiotic Resistance and the Ribosome (pg 320)

### **PARTE III: Cell Structure and Function**

#### **Cap. 9: The Nucleus**

The Nuclear Envelope and Traffic between the Nucleus and the Cytoplasm (pgs 361-370)

Internal Organization of the Nucleus (pgs 371-375)

### **PARTE IV: Cell Regulation**

#### **Cap. 17: Cell Death and Cell Renewal**

Stem cells and the Maintenance of Adult tissues (pgs 700-708)

Embryonic Stem Cells and Therapeutic Cloning (pgs 709-713)

#### **Cap 18: Cancer**

The Development and Causes of Cancer (pgs 719-728)

Tumour Viruses (pgs 729-732)

Oncogenes (pgs 733-741, 744-fig. 18.29)

Tumor Suppressor Genes (pgs 746-750, 753-754)

Molecular Approaches to Cancer Treatment (pgs 755-760)

Key Experiment: The Discovery of Proto-Oncogenes (pg 737)

Molecular Medicine: STI-571 Cancer Treatment Targeted against the bcr/abl

Oncogene (pg 759)
