

Bot.Me: A revolutionary partnership

How AI is pushing man and machine closer together

With a market projected to reach \$70 billion by 2020, artificial intelligence is poised to have a transformative effect on consumer, enterprise, and government markets around the world. While there are certainly obstacles to overcome, consumers believe that AI has the potential to assist in medical breakthroughs, democratize costly services, elevate poor customer service, and even free up an overburdened workforce.

Some tech optimists believe AI could create a world where human abilities are amplified as machines help mankind process, analyze, and evaluate the abundance of data that creates today's world, allowing humans to spend more time engaged in high-level thinking, creativity, and decision-making.

Based on our research into consumers, experts, and business execs, here's how we think AI will amplify our world:

AI takes center stage

By 2025, our respondents think it's most likely AI will...

Make a top 100 *Billboard* song

Create a piece of art that is worth over \$100,000

Write a hit TV series

They are less optimistic about its potential to create award-winning work, with the least likely being...

Authoring a *New York Times* best seller

Writing a movie that wins an Oscar

Winning a Pulitzer Prize for journalism
