WARNING: This product can expose you to chemicals including Lead which is known to the State of California to cause cancer birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov

SPECIAL NOTES:

- Tie Down is designed for OEM or stock sized battery. This will work with many popular aftermarket batteries but may not work with all. Please take time to check fitment before bolting down.
- If plastic cover over positive battery terminal is missing, disconnect negative wire from battery to install this part.
- If your battery is leaking fluid, replace battery and clean all surfaces before installation. If your battery has corrosion anywhere on the top surfaces, properly and safely remove all corrosion before installing battery tie down.

Parts Included With PERRIN Battery Tie Down

- **(1) PERRIN Battery Tie Down**

Installation Procedures

1. Using 10mm socket, unscrew plastic ground wire hold down from battery tie down. **NOTE: Pulling up while unscrewing will aid in removal.**
2. Using 10mm socket, loosen nuts securing OEM battery tie down to car; do not remove nuts completely. When they are loosened enough, you will be able to unhook lower portion from car.
3. Lift OEM tie down from battery and now remove nuts from threaded rods. Place rods through PERRIN battery tie down and install nuts roughly 1 or 2 full turns.
4. Drop PERRIN Tie Down over battery and hook short threaded rod back into hole in chassis next to the shock tower.
5. Long threaded rod (between battery and engine) needs to be hooked through hole in bracket.
6. Snug nuts down evenly working left to right, until battery can no longer be moved side to side. If done properly bracket should be equally tight on both nuts and sit flat on battery. If it's crooked, loosen tighter side and try again.
7. Reinstall plastic ground wire hold down to threaded rod by placing over threads and pushing down.
