MARKETABLE PHOSPHATE ROCK IN JUNE 2018

U.S. marketable phosphate rock production in June was 2.27 million metric tons (Mt), which was 10% lower than that in May and 5% lower than that in June 2017. Total production for January through June was 13.5 Mt, which was slightly lower than that in the same period of 2017 (table 1).

Phosphate rock used in the United States in June was 1.78 Mt, which was 4% lower than that in May and 15% lower than that in June 2017. Total phosphate rock used in January through June was 11.5 Mt, which was 14% lower than that in same period of 2017. U.S. producer stocks were 5% higher those at the end of May and 37% higher than those at the end of June 2017 (table 1).

Imports of phosphate rock in June were 246,000 metric tons, which was 23% lower than those in May and slightly lower than those in June 2017. Imports of phosphate rock for January

through June were 48% higher than those in same period of 2017 (table 2). Imports of phosphate rock can vary substantially from month to month based on sales contracts and production schedules of the phosphate plants.

Apparent consumption for 2018, based on annualized data, was estimated to be 26.0 Mt, compared with 28.2 Mt in 2017 (table 3).
