STONE (DIMENSION)
(Data in thousand metric tons unless otherwise noted)

Domestic Production and Use: Approximately 1.5 million tons of dimension stone, valued at $275 million, was sold or used in 2006. Dimension stone was produced by 100 companies, operating 136 quarries, in 35 States. Leading producer States, in descending order by tonnage, were Wisconsin, Georgia, Indiana, Vermont, and Massachusetts. These five States accounted for about 62% of the production. Leading producer States, in descending order by value, were Indiana, Wisconsin, Vermont, Georgia, and South Dakota. These States contributed about 53% of the value of domestic production. Approximately 38%, by tonnage, of dimension stone sold or used was limestone, followed by granite (27%), marble (14%), sandstone (13%), miscellaneous stone (7%), and slate (1%). By value, the leading sales or uses were for granite (39%), followed by limestone (35%), sandstone (9%), marble (7%), miscellaneous stone (6%), and slate (4%). Rough block represented 64% of the tonnage and 54% of the value of all the dimension stone sold or used by domestic producers, including exports. The leading uses and distribution of rough block, by tonnage, were in flagging, exports, and unlisted and unspecified applications (36%) and construction (34%). Dressed stone mainly was sold for flagging (27%), curbing (24%), and ashlars and partially squared pieces (17%), by tonnage.

Recycling: Small amounts of dimension stone were recycled principally by restorers of old stone work.

Import Sources (2002-05 by value): Dimension stone: Italy, 25%; Turkey, 20%; China, 9%; Mexico, 9%; and other, 37%. Granite only: Brazil, 26%; Italy, 17%; India, 16%; Canada, 13%; and other, 28%.

Tariff: Dimension stone tariffs ranged from free to 6.5% ad valorem, according to type, degree of preparation, shape, and size, for countries with normal trade relations in 2006. Most crude or rough trimmed stone was imported for 3.0% ad valorem or less.

Depletion Allowance: 14% (Domestic and foreign); slate used or sold as sintered or burned lightweight aggregate, 7.5% (Domestic and foreign); dimension stone used for rubble and other nonbuilding purposes, 5% (Domestic and foreign).

Government Stockpile: None.

Prepared by Thomas P. Dolley [(703) 648-7710, tdolley@usgs.gov, fax: (703) 648-7975]
Events, Trends, and Issues: The United States is the world's largest market for dimension stone. Domestic production tonnage remained steady at about 1.5 million tons; value increased to $275 million in 2006 from $269 million in 2005. Imports of dimension stone continued to increase. Imports increased by 15% in value to about $2.5 billion. Dimension stone exports increased to about $68 million. Apparent consumption, by value, was $2.7 billion in 2006—a $328 million increase from that of 2005. Dimension stone for new construction and refurbishment is being used more commonly in both commercial and residential markets. Increased domestic production and imports, along with improved quarrying, finishing, handling technology, greater varieties of stone, and the rising costs of alternative construction materials, are among the factors that suggest the demand for dimension stone will continue to increase during the next 5 years.

Adequate except for certain special types and local shortages.

World Resources: Dimension stone resources of the world are sufficient. Resources can be limited on a local level or occasionally on a regional level by the lack of a particular kind of stone that is suitable for dimension purposes.

Substitutes: In some applications, substitutes for dimension stone include aluminum, brick, ceramic tile, concrete, glass, plastics, resin-agglomerated stone, and steel.
