

60201/60201-E | Serial Receiver

The 60201 or 60201 - E Serial Receiver is the data link between remote RF transmitters and Actall's Crisis Controller® software, allowing virtually thousands of high performance 900MHz transmitters to work with the PALS® 9000 systems. The Serial Receiver converts alarm transmissions from Actall's transmitters into a serial data stream which is monitored and interpreted by the Crisis Controller® software. The Serial Receiver is fully supervised for reliable serial communications.

Features & Benefits

- Compatible with the PALS® 9000 systems
- Reliable 900 MHz transmitter to receiver operation via serial data link
- 900 MHz spread spectrum radio link
- *RS232 communications between the 60201 Serial Receiver and Crisis Controller® software*
- Software programmable receiver parameters
- Diversity antenna for enhanced reception in any receiver orientation
- Multiple receiver capabilities
- Easy installation and wiring hookups
- Weather resistant enclosure available
