

COVID-19 Safety Measures

The following lists how CPR is taking necessary precautions to ensure safety with every remodel project at every job site.

INTERIOR PROJECTS where the client *is* living in the home:

- Following the best practices as set forth by the EPA for Lead Paint Containment, we will put plastic up to isolate work areas and will require everyone to sanitize their hands prior to entering and/or exiting the work area; this includes us and our sub-contractors, trades and our clients.
- We will use disinfectant to wipe down public workspaces 2x daily.
- We will rent a Port-a-Jon for each location when a non-shared bathroom is not available for use in the client's home.
- An established hand washing/sanitizing station will be placed outside of each client's home in the designated transition area.

INTERIOR PROJECTS where the client *is not* living in the home:

- We will require everyone to sanitize their hands prior to entering and/or exiting the work area; this includes us, sub-contractors, trades and our clients.
- We will rent a Port-a-Jon for each location when a bathroom is not available for use in the client's home.
- An established hand washing/sanitizing station will be placed outside of each client's home in the designated transition area.
- We will use disinfectant to wipe down public workspaces 2x daily.

EXTERIOR PROJECTS:

- We will rent a Port-a-Jon for each location, which will include a hand washing station or hand sanitizer solution.
- We will require all sub-contractors to wash and/or sanitize their hands throughout the day to prevent the spread of germs on public surfaces, as described under Workspaces.
- We will use disinfectant to wipe down public workspaces and bathrooms 2x daily.

ADDITIONAL PRECAUTIONS FOR ALL INTERIOR/EXTERIOR PROJECTS:

- Any worker (Castle Pines Remodeling owners and Trade/ Sub-contractor) showing cold or flu-like symptoms will be sent home. These symptoms include fever, cough and shortness of breath.
- Workers will be required to stay home and not come to work until they are free of fever (100°F or greater using an oral thermometer) coughing, and shortness of breath for at least 24 hours, without the use of fever-reducing or other symptom-altering medicines (e.g. cough suppressants).
- If a client is showing cold or flu-like symptoms, we may suspend work on their project until we are in agreement that they pose no risk to our workers and/or are no longer contagious.
