SK04 - Skin Cancer Tissue Microarray with Progressive Changes

**Cases:** 48

**Cores:** 96

**Core Size:** 1.5mm

**Core Thickness:** 4μm

**Format:** 8 x 12

**QA/QC:** H&E, IHC anti-Cytokeratin

**Description:** Skin tumor tissue array, set 2, 96 cores, 48 cases from normal, premalignant and cancer tissues with progressive grades and stages in duplicates.

All tissues were fixed in 10% neutral buffer formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or Startfrost Adhesive slides. All TMAs are cut fresh upon ordering. They all have a guaranteed six month shelf-life at 4 degrees Celsius from the date of shipment. Additional cores not listed are orientation markers and have no data. There may be <5% core loss per slide but the core retention rate should be >90%.

**Note:** Bake at 60°C for 30 minutes before use.
