Dear Claire:

Thank you for all the arrangements you coordinated for my delightful visit to Australia. It was an exhausting schedule but it provided the opportunity to meet many, many wonderful people and see some beautiful cities.

I had some extra copies of several photographs made and I thought you might enjoy having them.

Thanks again and best wishes.

Sincerely,

Constance B. Wofsy, M.D.

Dr Constance Wofsy,
[redacted]

Dear Dr Wofsy,

THIRD NATIONAL CONFERENCE ON AIDS HOBART 4 - 6 AUGUST 1988

I have enclosed for your information details on the Conference Program and an information package on Tasmania.

Also included is an itinerary for your time in Australia. There may be some changes to your itinerary. I will forward a final itinerary closer to the date of your departure. If you require any special arrangements or would like to meet any particular people would you please advise me.

Should you have any queries I may be contacted on (062) 89 6996 at work or (062) 88 1302.

Yours sincerely,

Claire Baram

Dear Michael:

Enclosed is the promised picture of our exuberant group at the end of the conference in Tasmania. It is a particularly nice picture of everyone, I think. I hope this finds you well recovered from your jet lag and savoring what are hopefully happy memories.

Be well.

With regards,

Connie Wofsy

Dear Norbie:

It was delightful seeing you in Australia. Wasn't that a terrific meeting? This photo came out particularly well and I can't remember whether yours was one of the many cameras being snapped so I pass it on to you for whatever memories it elicits.

I suspect our paths will cross again.
Peace.

Sincerely,

Connie Wofsy

AIDS Program
1600 Clifton Road, **Mail Stop F40**
Atlanta, GA. 30333

Dear Mary:

I have just returned from an extended two week trip to find the enclosed on my desk. My secretary had logically assumed that your copy went to me and my copy went to you. However, he couldn't know that you and I spoke on different days with manuscripts organized by different people so I doubt very much that you have received another copy of the manuscript. I don't know what mental or computer petit mal led to the juxtoposition of your name and San Francisco General Hospital but the important thing is to get it back to you so that you can review it and make appropriate corrections. When you return it to Harry Haverkos, you might indicate the reason for the delay in your response. I have not received Gloria Weisman's summary of the second day presentation, but if by chance you have received that at the CDC, please forward it to me as well.

We are, of course, happy to welcome you as an honorary AWARE member.

Sincerely,

Connie W.

Dear Dr. Wofsy;

Our book, Managing AIDS In The Workplace, has been released by Addison-Wesley Publishing Company. We are pleased with the finished product, and believe that it will be a useful guide for organizations across the country as they continue to confront the issue of AIDS.

Sam Puckett and I wish to acknowledge you for your work in the field of AIDS that assisted us in the development of the book. Your early efforts paved the way for a clear, responsible, ethical and humane response to the AIDS epidemic from the corporate sector nationally.

Please accept this copy of Managing AIDS In The Workplace with our appreciation.

Sincerely,

Alan Emery

Ward 84
San Francisco, CA 94110

Dear Dr. Wofsy,

The California Nurses Association AIDS Education and Training staff would like permission to reproduce 800 copies of the following article(s) to include in our AIDS Train the Trainer Program Guide:

> Kaplan, L.D., Wofsy, C.B. and Volberding, P.A. (March 13, 1987). Treatment of Patients With Acquired Immunodeficiency Syndrome and Associated Manifestations. JAMA, 257 (10), 1367-1374.

This educational guide will not be published or sold. It will be used in conjunction with intensive 2-day training workshops, funded by the state of California through June of 1989, for 800 health care providers. Participants are charged a fee of $20 to cover the cost of lunch and room rental for the 2-day training. There is no charge for registration or materials.

We would appreciate a response by October 15, 1988. I have enclosed a self-addressed, stamped envelope for your convenience.

Thank you very much for your assistance.

Sincerely,

Marion Gillen

From: Elizabeth D. Laporte
Re: Trial Schedule

We went to court yesterday to see whether we would be assigned a judge and to begin trial. The good news is that we were assigned to a judge, Judge Sutter, who we believe will be fair and impartial and is reputed to be quite intelligent. His courtroom is in Oakland, not Hayward, in department #38 of the Alameda Superior Court, Northern division.

The bad news is that we will not begin our trial until the other trial that Judge Sutter is now conducting is over. It is not certain when that trial will end. Although the lawyers in that case predict that it will be over in late September or early October, sometimes trials settle in the middle of trial, or are otherwise shorter or longer than expected. Accordingly, our trial could begin anytime between now and November (or possibly even later, although that is unlikely).

The court will only give us 24 hours' notice beforehand that we must begin our trial. Thus, we will only know 1 day in advance when we have to begin.

Therefore, I must ask you once again to please let us know the days between now and December when you cannot testify. Please put your name on each day on the enclosed calendar that you are not available, and send the calendar back to us in the enclosed stamped, addressed envelope.

Thank you for your cooperation and patience. I will contact you as soon as we get any more news about the trial date.

Sincerely,

Elizabeth D. Laporte

Leslie Lingaas
[redacted]

Dear Leslie:

I have added a few corrections as you can see. Thank you for rewriting it in a consistent style. I really appreciate it as I was moving along in some haste. I thought the way to deal with the verbally presented material was to indicate it as such, and I have added that in red. Likewise, I couldn't find where M. Rekart came from so "(with affiliation not indicated)" seemed like a reasonable way to deal with this.

I hope the information is satisfactory. Obviously, we will have to go with it. I wasn't able to attend all of the presentations of the abstracts I remarked upon.

AUG 2 4 1988

Again, thanks for the rewrite into conforming style.

AUG 2 4 1988

Sincerely,

Connie W.

epidhetero33.doc

Heterosexual Transmission of HIV (Wofsy)

A number of abstracts provided evidence that transmission between partners is enhanced with decreasing numbers of CD-4 positive cells and the presence of p24 antigen in the infected partner, although transmission may occur in the absence of these factors. Work by researchers in Antwerp, Belgium (Abstract 4004), Lusaka, Zambia (Abstract 4006), DN Lawrence et al of the Centers for Disease Control (Abstract 4009), JJ Goedert et al of the National Cancer Institute (Abstract 4019), and M. Fischl et al of Miami, Florida (Abstract 4060) support this concept.

Several abstracts addressed the infection rate in women of infected partners. Studies of HIV-infected hemophiliacs and their sexual partners reported by JJ Goedert et al of the National Cancer Institute described the probability of HIV infection after first vaginal intercourse at the first known time of HIV infection in the male. Forty-three per cent of partners are projected to eventually become infected, ~~with~~ the years of exposure and percent expected to become infected was as follows: one to two years (0.9%); four to five years (5.3%); five to six years (10%); six to seven years (27%). were verbally reported Transmission was increased with progressive symptoms or an AIDS diagnosis in the male accompanied by a decreased T-4 count and the presence of p24 antigen. Eight of 85 (9%) of female partners of p24-antigen negative men were infected, in contrast to 7 of 17 (41%) of female partners of p24-antigen positive men. The absence of p24 antigen thus does not absolutely protect from transmission. In this study, HIV seroconversion was not associated with frequency of vaginal intercourse (2), sex during menses, irregular condom use, birth control pills, tampons, hysterectomy, STDs, or specific sexual practices including oral and anal sex.

Are these #'s correct? I had trouble confirming these from the abstract (from my notes)

I added this from abstract in oral report this was stated

Transmission was, in fact, associated with infrequent sex, presumably because of decreased libido as illness progressed. (Abstracts 4019 and 4144).

N Padian et al of the University of California, Berkeley described an overall infection rate of 24% in a study of 132 female partners of HIV-infected men, with only anal sex and non-white race significantly associated with acquisition of the virus. No correlation was found with frequency of sexual exposure or disease status of the infected partner. Twenty male partners of infected women were also evaluated in this study and none has become infected to date. Efficient male to female transmission, i.e., infection after less than 100 sexual exposures, was not associated with anal intercourse. One efficient male transmitter was antigen-negative. (Abstracts 4020 and 4062)

A study from Africa highlights risk factors that contribute to heterosexual transmission in that part of the world. DW Cameron of the University of Manitoba, Winnipeg and University of Nairobi, et al examined men in Nairobi who had frequented prostitutes and found that regular contact with a prostitute, the presence of genital ulcer disease, and lack of circumcision were all significantly and independently associated with acquisition of HIV. (Abstract 4061)

Changes over the years in the epidemiology of heterosexual HIV transmission in the United States were also noted at the conference. M Chamberland et al of the Centers for Disease Control reported that while heterosexual transmission still accounts for 4% of all AIDS cases, US-born persons accounted for 68% of this group in 1987, as opposed to 15% in 1982. Of the US-born heterosexually transmitted cases, 72% are black or Hispanic and 79% are female. (Abstract 4017). ET Starcher at al of the

CDC reviewed disease trends in AIDS cases reported to the CDC from 1981 to 1987. Their abstract indicated that women have increased from 7% to 9% of all AIDS cases, while Kaposi's sarcoma as a presenting diagnosis has decreased from 19% to 9%. (Abstract 4185).

One report addressed the likelihood of HIV transmission from artificial insemination. A study by M Rekart (Connie--do you know where was this work done??) found one seropositive sperm donor in 40 tested. Two of 24 female recipients tested were positive for HIV. No immunologic data or other cofactors were available for analysis. (Abstract 4026)

Seroprevalence studies in special populations are gaining credence as a way of better estimating the incidence of HIV infection. B. Sperling et al of Mount Sinai Medical Center, New York, reported testing of 231 parturients for HIV antibody. Three percent were positive by ELISA, and in those who were less than 20 years old, the rate was nine percent. Interestingly, none of the seropositive females was identified by a voluntary screening program to assess risk of infection. (Abstract 4030)

Australia

Dear Elizabeth:

I got so much pleasure out of the time we spent together in various locations during my wonderful visit to Australia. The conference provided a very memorable human, scientific, and especially political experience. I loved our trip to Port Arthur - short and illogical as it was. I love the two snapshots I have enclosed taken in the convicts' quarters in front of the blazing fire. I have enclosed extra copies for Shirley but must rely upon you to send them to her as I don't even have her full name let alone an address.

I extend my very best to you. I know that you have a valuable contribution to make and for my part, I feel re-energized to continue the efforts on this side of the Pacific.

With best regards,

Sincerely,

Dear Mr. Youngman:

Thank you for your letter of July 10th asking for a copy of Dr. Wofsy's presentation at the IV International Conference on AIDS entitled, "AIDS Care : Meeting the Health Care Needs of the HIV Infected". Unfortunately for your request, this presentation will be published in the October, 1988 issue of the Journal of the Acquired Immunodeficiency Syndrome. Due to copyright laws and agreements with publishers, she is therefore unable to comply with your request. However, you may contact JAIDS at:

Raven Press
1185 Avenue of the Americas
New York, NY. 10036

I am sure that they would be happy to sell you a single issue or you may be able to obtain one in your area from a medical contact if you choose not to subscribe. After the date of publication, we would be happy to comply with your request.

If there are any questions or further information is required, please do not hesitate to contact me at (415) 821-5531.

Sincerely,

Sam Broyles
