TITLE

LIVESTOCK WASTE MANAGEMENT

SITUATION STATEMENT:

(Major problems, needs of people, history, and status of problem, importance to county.)

The hot winds of politics have whipped the fires of legislation into an all consuming conflagration and the livestock, dairy, and poultrymen of our fair state stand squarely in the path of the firestorm. Livestock and poultry manure are no longer considered a resource to be applied beneficially to the soil by many but rather a problem and pollutant by most.

LONG RANGE OBJECTIVES:

Teach and demonstrate approved handling techniques and use of livestock effluent to enable consideration of this material as a useable resource rather than a problem.

SHORT RANGE GOALS:

(Stated in measurable terms where possible.)

Help plan and layout livestock and dairy designs and waste disposal storage structures so our operators can live within the existing regulations governing same.

RESEARCH AND TEACHING ACTIVITIES PLANNED

Include both methods and operations for logical time periods in which work will be done. Attach additional page if needed.

List name of project leader and others involved (for all CW projects).

Tours
Demonstrations of working structures
Help in layout and design
Distribution of information publications pertinent to project

Time frame: Whenever the opportunity is brought about.

¹ See CEMIS Handbook for instructions on use of this form.

² If research is involved, attach project plan supplement with detailed research plans.
