

SalmoBreed

**GMO FREE STATEMENT, SALMOBREED MATERIAL/
GMO-FRI ERKLÆRING, SALMOBREED**

SalmoBreed is a genetics and breeding company specializing in Atlantic salmon. The company was registered in 2001, but the breeding of the SalmoBreed strain has roots back to the early beginning of salmon production in 1970. SalmoBreed aims to deliver the best ova to meet market demands at any given time delivered from our advanced breeding program based on selected traits.

This is a confirmation that **the DNA of the SalmoBreed Atlantic salmon ova are GMO free and have not gone through any changes or alterations using genetic engineering**, either on a genomic, chromosomal or genetic level. The ova are non-GMO material produced under a strict quality assurance system. All producers of SalmoBreed are also Freedom Food and Global Gap certified and produce in ISA free segments.

Dette er en bekreftelse på at **lakserogn fra SalmoBreed er GMO-fritt og at dets DNA ikke har vært igjennom endringer ved bruk av genteknologi**, hverken på et genom-, kromosom- eller gennivå. SalmoBreed lakserogn er GMO-fritt, produsert under de strengeste kvalitetsvilkår. Alle SalmoBreed produsenter er i tillegg Freedom Food- og Global Gap-sertifisert, og produseres i ILA-fritt segment.
