Moses Lake Irrigated Soft White Spring Wheat - Preliminary Data

1. Grain yield in the 2013 Moses Lake soft white spring wheat trial averaged 112 bushels/acre, 9 bushels/acre higher than the 5-year average. The Moses Lake nursery was located about six miles southeast of Moses Lake, WA (R. Bergeson, cooperator).
2. This nursery was seeded on 18 March, 2013 following Potatoes. Seed was placed at a 100#/acre seeding rate using a double-disc plot drill set on 6-inch spacing. A spring soil test showed 257#N/acre and 150#N/acre was applied before seeding. Spring seeding conditions and establishment were good.
3. Yields ranged from 85 bu/acre to 137 bu/acre. Yield values within the LSD range of the highest yield are shown in bold and 4 of the 24 entries are in this group. 'UI-Stone' was the highest yielding named entry in the trial and 'Nick' was the highest yielding over 5-years at this location. No fungicide was applied and stripe rust was not a factor.
4. Test weights averaged 59.8 lbs/bu with a range from 57.3 to 61.51 lbs/bu. Grain protein averaged 12.7% with a range of 11.5 to 14.0%. The average plant height was 43 inches and lodging varied from 0 to 78%.
