

CURIOSITY CL+

SOFT WHITE WINTER TWO-GENE IMI WHEAT

Curiosity CL+ is a soft white winter two-gene Imidazolinone tolerant (Clearfield) wheat variety developed and released in 2013 by the Agricultural Research Center of Washington State University. It's the first two-gene Clearfield (CL+) wheat variety released by WSU. Compared to the single-gene, the two-gene technology provides significantly better tolerance to Imidazolinone group of herbicide imazamox. Curiosity CL+ was developed using marker-assisted background selection approach. Compared to popular wheat varieties including those with Clearfield technology, Curiosity CL+ has higher yield potential, excellent snow mold resistance, and better stripe rust resistance. Curiosity CL+ is ideal for Pacific Northwest areas where ORCF102, ORCF103, Eltan and Xerpha are currently grown.

AGRONOMICS

Imidazolinone Tolerance	Two-gene
Yield Potential.....	Excellent
Test Weight	High
Grain Protein	Good
Cookie Diameter.....	Very Good
Sponge Cake Performance.....	Superior
Quality	Acceptable

DISEASE RESISTANCE

Stripe Rust.....	Moderately Resistant/Susceptible
Snow Mold	Better than Eltan
Winter Hardiness.....	Similar to Eltan
Cephalosporium Stripe	Similar to Eltan
Strawbreaker Foot Rot	Similar to Eltan
