

STRINGTone®

FOR GUITAR PARTS AND STRINGS

Beyond Strings Multi-Zone Application Technology

Unmatched versatility in a music instrument maintenance product allowing for discrete or blanket applications.

STRINGTone® covers all the maintenance demands of guitars - from the headstock to the bridge.

- A.** Lubricates tuning gears and shafts for smoother operation
- B.** Reduces String Tree binding and friction
- C.** Reduces nut saddle friction and wear
- D.** Cuts down on fret wear and string fretting notches
- E.** Microfilm protects fretboard against skin oils and salts
- F.** Less toxic than denatured alcohol for cleaning and will not dry out wood
- G.** Dry-to-touch formula penetrates down to string core flushing out dirt and grime
- H.** Will not harm neck, delaminate fretboards or bindings
- I.** Contains no silicone or Teflon that builds up on strings and attracts dirt
- J.** Reduces Scratch Plate pick marks
- K.** Kills noise and static in pickup switches
- L.** Cleans and lubricates volume and tone pots for smooth noise-free operation
- M.** Less string stress and notch wear for friction-free operation of bridge saddles
- N.** Lubricates tuning mechanisms to ensure smooth adjustment and accurate intonation
- O.** Overall deep cleaning and lubrication for trouble-free tremolo operation
- P.** Eliminates pops and clicks from jacks and plugs
- Q.** Will not harm finishes and resists fingerprints
- R.** Protects gold and chrome plated parts from oxidation and corrosion

Technical Information for repair

STRINGTone® is a spray-on micro-film lubricant conditioning formula that satisfies the instrument care and maintenance needs of guitarists, guitar techs, luthiers, and other string instrument players. The result of micro-barrier technologies borrowed from ballistics research, STRINGTone® is unequaled in its ability to penetrate and lift away deeply embedded grime and tiny debris particles. This deep conditioning allows treated strings to vibrate without restriction, providing superior sustain and richer, more vibrant sound quality. STRINGTone® dries to the touch in seconds so that your guitar is ready to play almost immediately.

A Revolution in Guitar Maintenance

Use as needed to eliminate grime, dust build-ups, and metal oxidation on strings. StringTone is applied to strings with a lint-free cloth, grasping the strings with the cloth and sliding along the string surface. Also apply to fretboard, body, and strings with a lint-free cloth, and wipe away the excess. Conditions and cleans guitar electronics, pickups, and other metal components, and will not effect fine wood or plastic surfaces.

Protection That Lasts

After treatment, a micro-thin film barrier remains to offer long-lasting protection from oxidation and corrosion, greatly lengthening the life of strings and other metal components. STRINGTone's gentle formula resists migration and won't build up.

The Science of SoundSynergies® Proof that you can hear

Controlled acoustic lab tests verify STRINGTone® effectiveness. The formula penetrates deep to the string core, removing dust and debris that dampen tone and response. Using STRINGTone - treated strings increases dynamic range, enhances upper and bass frequencies, and provides richer harmonics.
