

LECTRICare®

FOR CINE AND BROADCAST
ELECTRONICS GEAR
FOR STAGE SOUND/LIGHTING
ELECTRONICS GEAR

Multi-Zone Application Technology

Unmatched versatility
in electronics gear and
equipment maintenance
products allowing for
discrete or blanket
applications.

HEAR AND FEEL THE DIFFERENCE®
Comprehensive Maintenance Technologies.
Lowest cost per use.

LECTRICare®

**Cine & Broadcast conditions
and protects delicate video
components, cameras,
microphones, etc.**

**Stage Sound/Lighting
cleans, conditions lighting
gear, direct boxes, and
connectors with minimal
time and expense.**

- A.** Cleans & protects battery pack contacts, audio/video jacks and plugs from oxidation and corrosion.
- B.** Dry-to-touch formula lubricates camera sleds for smooth attachment and removal
- C.** Lubricates and protects tripod, dolly and crane hardware from corrosion, moisture and humidity
- D.** Flush out dirt and oxidation from stage lighting plugs, receptacles and connectors
- E.** Cleans and lubricates mounting brackets and hardware
- F.** Provides protection against oxidation and pitting for all metal surfaces
- G.** Kills static and noise in control pots, faders, & switches
- H.** Eliminates pops and clicks from jacks and plugs
- I.** Penetrates and cleans hard to reach areas for maximum conductivity
- J.** Advanced barrier film technology ensures trouble free performance of distribution boxes
- K.** Coats and protects cable sheath and hardware
- L.** Mic snake connectors and plugs are protected against oxidation, moisture and humidity
- M.** Cleans and conditions microphone roll-off switches, battery compartment contacts, and audio contacts
- N.** Lubricates / protects microphone stands and mounting hardware for smooth trouble-free operation

Technical Information for repair

Lighting systems, direct boxes, and cable snakes are just some of the gear that goes into a live concert or recording session. Oxidation build-up, heat, moisture, and friction all put stress on delicate electronic equipment. Stage/Lighting cleans and conditions this valuable gear and gives extended protection with a lasting micro-thin film coating. LECTRICare® Cine & Broadcast provides these same benefits for cameras, mics, and editing gear in a special custom formula for video applications.

LECTRICare® Easy-One-Step Conditioning

Formulated to maintain a wide range of electronics technology, LECTRICare® is the result of research into micro-lubricants for ballistics applications. Unequaled in its ability to penetrate and lift away deeply embedded grime and tiny debris particles, LECTRICare® ensures that the signal path remains clear and error-free. A micro-thin barrier coating remains after treatment to resist heat and oxides, promote enhanced electrical conductivity, and protect and extend the life of sensitive electronics. Applies with a soft lint-free cloth. Includes an application tube to apply to difficult to reach areas. LECTRICare® quickly dries to the touch for immediate use.

Environmentally responsible

LECTRICare's non-toxic formula is made expressly for use on all electronic music gear components and parts, and is silicone and teflon free. The proprietary formulation is the culmination of years of research and development in flex-film technologies, and has been a cornerstone of private label products since 1986.
