

PROcussionCare®

WEARBARRIER FOR DRUMHEAD CONDITIONING AND HARDWARE

Extends Drum Head Life Multi-Zone Application Technology

Unmatched versatility in a music instrument and gear maintenance product allowing for discrete or blanket applications.

PROcussionCare®
WearBarrier performance

SNARE HEAD - treated

SNARE HEAD - Un-treated

HEAR AND FEEL THE DIFFERENCE®
Comprehensive Maintenance Technologies.
Lowest cost per use.

PROcussionCare® WearBarrier
revitalizes drumhead sound
and response with one easy
application. Prevents excess
wear and extends drumhead
life up to 4X.

- A.** Better seating of counter-hoop flange for balanced torque distribution
- B.** Lubricates tension rod bolts and screws for smoother more accurate tuning
- C.** Conditions both sides of batter head to reduce uneven surface tension and facilitate more stable and accurate tuning
- D.** Guards and protects against excess head wear
- E.** Removes and prevents black cymbal oxide that transfers to drumheads via stick tip contact
- F.** Softens and conditions glue bead to reduce substrate fiber damage and improve batter head break-in
- G.** Lubricates all shell bearing surfaces to prevent substrate damage and promote smooth tensioning of heads
- H.** Enhances head-to-rim contact for a larger sweet spot
- I.** Lubricates and protects all drum hardware from pitting and corrosion
- J.** Protects all metal surfaces from oxidation, corrosion and resists fingerprints
- K.** For resonant heads apply to both surfaces except on a snare side
- L.** Reduces stick tip black oxide transfer to drum heads
- M.** Extends playing life of stick tips and mallets

Technical Information for repair

ProcussionCare® WearBarrier is a breakthrough conditioning and lubricant formula for drumheads that prevents excess wear, improves drumhead response, and optimizes sound quality. PROcussionCare's breakthrough micro-barrier conditioning technology removes embedded dirt and grime and black oxidation transfer from cymbals, leaving a micro-thin coating for better drumhead-to-bearing-edge contact. This creates an enhanced sweet spot, the central area of the drumhead with the most desirable tone. Overall sound is improved, heads and sticks last longer, and tuning becomes easier and more accurate.

More Punch, More Rebound

ProcussionCare Wear Barrier penetrates to lift away deeply embedded grime and tiny debris particles, ensuring that your drum's vibration and response is unrestricted. A micro-thin barrier lubricant coating remains after treatment to resist sticking impacts, promote punchier, deep tone, and allow increased stick rebound. Recommended application is with a soft lint-free cloth. Product quickly dries to the touch for immediate use.

Environmentally Responsible, Uniquely Effective

WearBarrier's non-toxic formula is made expressly for use on drumheads, stick tips, and hard mallet heads. Silicone and teflon free. The proprietary formulation is the culmination of years of research and development in flex-film technologies, and has been a cornerstone of private label products since 1986.
