

USING INSTRUCTIONS FOR

EYEBROW & EYELASH TINT

Easy and safe to use - short application time - best tinting results - lasts up to 4 weeks

BEFORE TINTING

- Gently remove eye make-up before tinting the eyelashes and brows (use a non-oily Eye make-up remover). In order to achieve the best possible tinting results, the eyelashes and brows must be dry and free of oil.
- Remove two Eye Protection Papers.
- Put the Skin Protection Cream on the client's lower lid and underside of the eye protection papers.
- Press on the eyelash protection papers right under the eyelashes of each eye to ensure that no tint touches the skin.

PREPARATION OF THE TINT (MIX 1:1)

Immediately before tinting, mix 2cm of dye and 10 drops of oxidant liquid into a creamy paste in a mixing cup using the application stick.

TINTING

With the client's eyes closed, apply the tint to the eyelashes using the application stick until they are completely covered in tint. Then apply the same or a lighter shade to the eyebrows in the direction of growth.

APPLICATION TIME

5 - 10 minutes depending on the desired intensity.

CLEANSING THE EYEBROWS

At the end of the application time, remove excess tint with a dry cotton ball. If the tint touches the skin, remove the spots quickly and gently using a tint remover. You must not use the tint remover directly on the eyelashes or on the skin around the eyes.

CLEANSING THE LASHES

After the application time, remove the eyelash protection papers carefully and remove excess tint using a dry cotton ball. Finally, remove any remaining tint with water and cotton. The client's eyes should remain closed until cleansing has been completed.

INSTRUCTIONS FOR SELECTING THE RIGHT COLOR

Make light eyelashes visible; highlight the full length by tinting the tips bleached by sun and water. To accentuate light brows, match the shade of the eyebrows to their hair color.

Sumita Black: Ideal for clients with dark black hair.

Sumita Brown: Ideal for clients with dark brown hair.

Sumita Light Brown: Ideal when applied on light blond to light brow hair.

Sumita Graphite: For discrete covering of grey/white hair. Can be mixed with brown and light brown shades to create an ashier tone.
