

Reset Secondary Passwords

You're able to use your regular NetID, but not your regular password, with EPM and/or Masher. You'll have to use a custom password for access.

Generate a Secondary Password

1. In Analytics, either
 - a. Click the **Reset Secondary Password** link in the **Get Started** section of the **Home** page, *or*
 - b. Navigate to the **Secondary Password** dashboard at **Dashboards > UAccess Analytics > Secondary Password**. Click the **Secondary Password Generator** link.
2. Log in with your UA NetID.
3. On the UAccess Analytics Masher and EPM Data Warehouse Secondary Password Generator website, you're offered two options:
 - a. Analytics Masher/EPM Individual Password
 - b. EPM Shared Account PasswordSelect the appropriate button to generate your new password.
4. The system will open and show you a cryptic 16-characters-plus-dashes password.
5. Click the little clipboard icon in the corner of the yellow password box to copy the password. You should also heed the recommendation that you save your new password in **Stache**, which is the UA's secure password storage site. That way you'll have access to your Masher password whenever you need it.
6. Click the link to go to Stache, where you need to create a new entry.
