Oracle Application Development Framework (ADF)

- A *framework* is a prebuilt service for solving a particular problem – like access to the database
 - Code libraries and standards support the framework
 - Implements code reuse and best practices
 - An architecture with code libraries
- ADF is a *meta-framework*
 - A wrapper for other frameworks
 - Available starting in JDeveloper 10g
 - Provides a consistent developer experience
- Pre-ADF available in OAF
 - Oracle Application Framework (UIX/MVC)
- Based on Model-View-Controller Java EE design pattern

ADF Architecture

What is Oracle Fusion?

- Fusion **Applications**
 - New business applications suite (in production)
- Fusion **Middleware**
 - Tools for building and running the applications (and your custom apps)
- Fusion **Architecture**
 - How to assemble various technologies to build FA
 - How to connect FM pieces

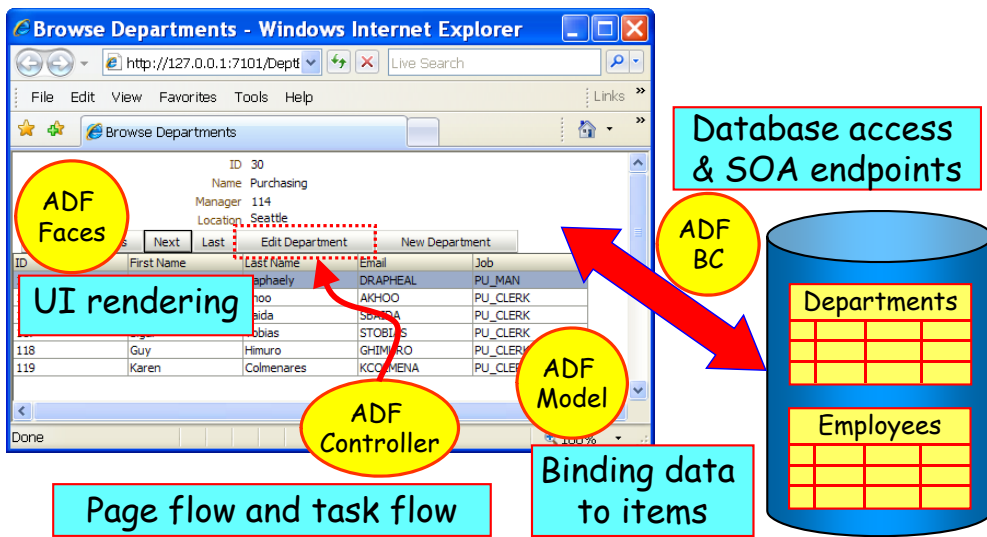

Which ADF Technologies to Use?

- *Core technology stack* used to create Fusion Applications is:
 - ADF Business Components
 - ADF Faces Rich Client
 - ADF Model
 - ADF Controller
- Other *high-level technologies* or strategies also used
 - SOA, ESB, Business Rules, WebCenter, BPM, BPA, BAM
 - Need to consider those, too, at the architectural level

but OOS

Where Do The Fusion Technologies End Up?

Agenda

- What is ADF and Fusion?

- ADF core technologies

- ADF BC
- ADF Faces
- ADF Model
- ADF Controller

- Required languages

The World View

In this best of all possible worlds ...
everything is for the best.

Dans ce meilleur des mondes possibles ...
tout est au mieux.

—Voltaire (1694-1778), *Candide*

ADF Business Components

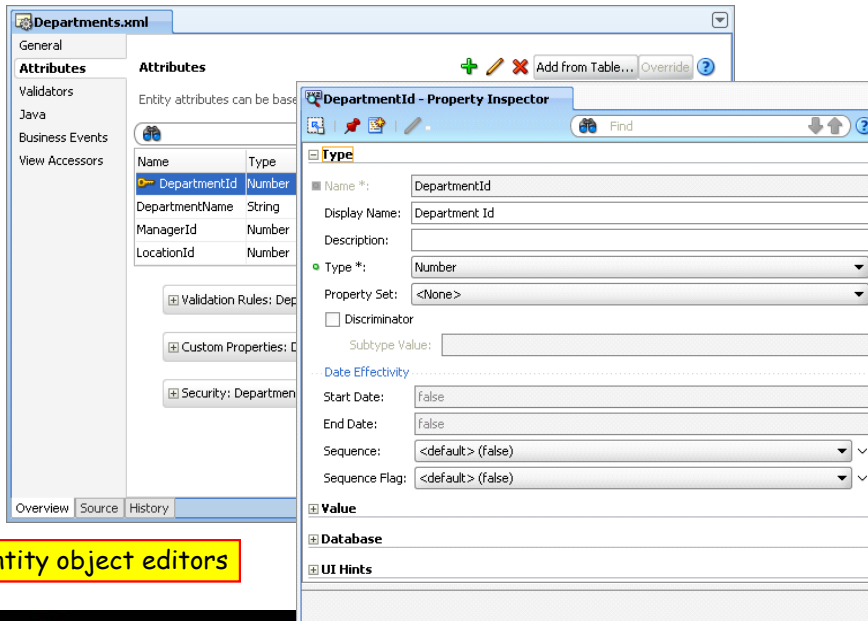

- ADF BC: an option in the Business Services layer of ADF
- Persistence: storing data in a database
- O/R mapping: Translates relational database things to object-oriented (Java) whatsits
- Handles JDBC mechanics
 - Creates SQL and handles results
- Primarily declarative
 - XML source code to define the use of framework classes

More About ADF BC

- Various component types
 - View objects: define queries
 - Entity objects: define insert-update-delete (“DML”)
 - View links: view object relationships
 - Associations: entity object links
 - Application modules: Define the data models and the database transaction
- It does not create user interfaces 

Sample ADF BC Development

The screenshot shows the ADF BC development environment. On the left, the 'Departments.xml' file is open, displaying a table of attributes: DepartmentId (Number), DepartmentName (String), ManagerId (Number), and LocationId (Number). On the right, the 'DepartmentId - Property Inspector' window is open, showing configuration options for the 'DepartmentId' entity type, such as Name, Display Name, Type (Number), and Date Effectivity.

Entity object editors

View Object Code

View Object = SELECT statement

```
<ViewObject
xmlns="http://xmlns.oracle.com/bc4j"
Name="AllEmployees"
Version="11.1.1.53.41"
SelectList="Employees.EMPLOYEE_ID,
Employees.FIRST_NAME,
Employees.LAST_NAME,
Employees.JOB_ID,
Employees.EMAIL,
Employees.HIRE_DATE,
Departments.DEPARTMENT_NAME,
Departments.DEPARTMENT_ID,
Departments.LOCATION_ID"
FromList="DEPARTMENTS Departments,
EMPLOYEES Employees"
Where="Departments.MANAGER_ID =
Employees.EMPLOYEE_ID"
BindingStyle="OracleName"
CustomQuery="false"
PageIterMode="Full"
UseGlueCode="false">
...
```

View Attribute = Column in query

```
<Attribute
Name="EmployeeId"
IsNotNull="true"
Precision="6"
Scale="0"
ColumnName="EMPLOYEE_ID"
SQLType="NUMERIC"
Type="oracle.jbo.domain.Number"
ColumnType="NUMBER"
TableName="EMPLOYEES"
PrimaryKey="true">
<DesignTime>
<Attr Name="_DisplaySize"
Value="22"/>
</DesignTime>
</Attribute>
<Attribute
Name="FirstName"
Precision="20"
ColumnName="FIRST_NAME"
...

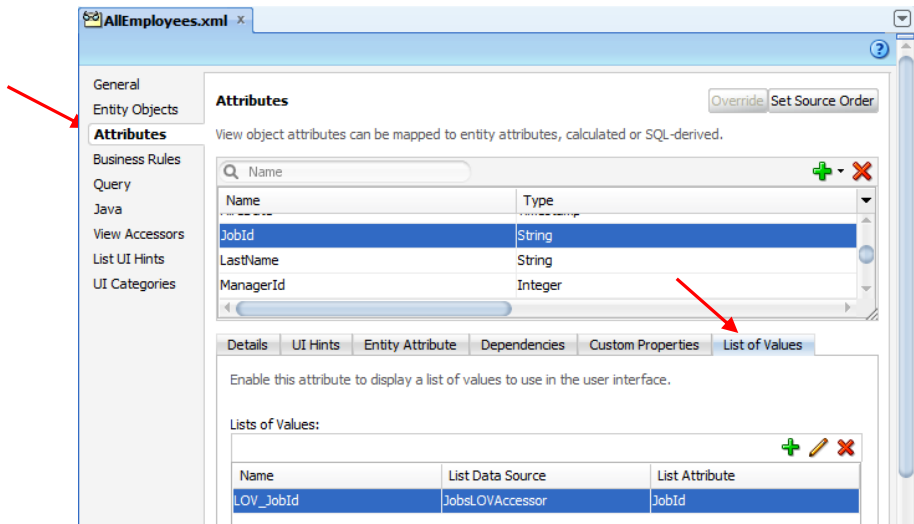

```

List-of-Values (LOV)

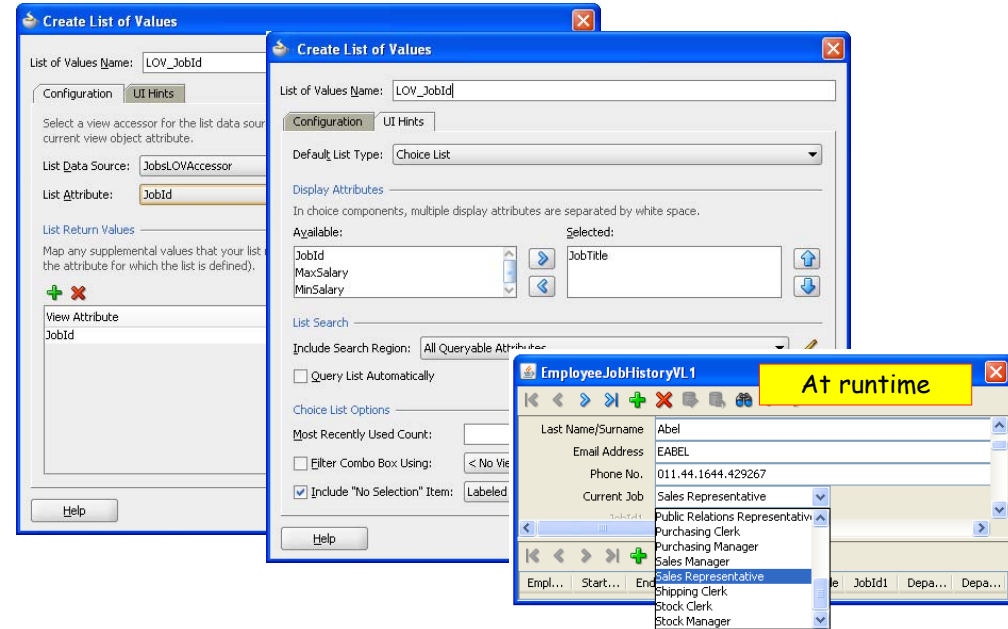

- Defined for an view object attribute
- Associate a query (view object) with the attribute
- Set up is declarative
 - Start in the view object editor
- UI code will display this attribute specially
 - Pulldown list item loaded with values
 - Popup list-of-values dialog

VO Editor – LOV Subtab

Create List of Values

View Criteria

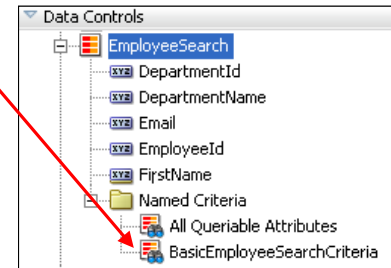

- Used for queries
- View Object Editor's Query page
 - View Criteria section
- View Criteria dialog
 - Define the WHERE clause declaratively

Declarative is the only method allowed.

View Criteria in the DCP

- Data Controls panel lists the defined criteria
- You can drag and drop a view criteria onto a JSF page

- Components are added for each attribute in the view criteria

Declarative Validation Rules

- Simple rules written on the entity object
- Method 1
 - Attributes tab
 - Validation Rules subtab
- Method 2
 - Business Rules tab
 - Attribute or entity level

Declarative Validation Benefits

- Quick validation on the app server side
- No Java coding!
- Add a friendlier message for ADF BC-level errors (e.g., length)
- Messages stored in a message bundle file that you can internationalize
- All UIs built from the entity object will contain the same validation
 - Like a trigger in the database
- You need to decide where to place business rules code

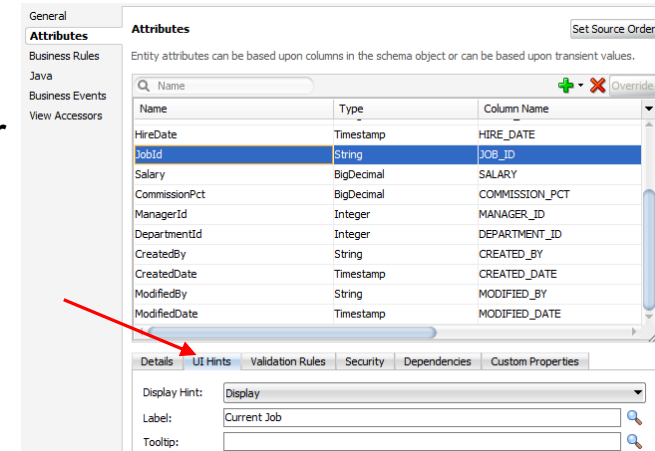

UI Hints

- A.k.a., *control hints*
- UI definitions stored in the entity object or view object definitions
 - Universal to all UIs created from those EOs or VOs
 - Provides consistency
 - “Set it and forget it”
- Can put the hints on either EO or VO
 - Rule of thumb: use the entity object UI hints whenever possible
 - Override on view object level if needed

Setting UI Hints

- In Entity Object editor, select attribute and click the UI Hints tab in the Property Inspector
- **OR** View Object editor Attributes tab, UI Hints subtab

Agenda

- What is ADF and Fusion?

- ADF core technologies

- ADF BC
- ADF Faces
- ADF Model
- ADF Controller

- Required languages

ADF Faces Rich Client Overview

- Fits into the View layer of ADF
- Evolution:
 - ADF UIX → ADF Faces → Apache Trinidad
 - ADF Faces → ADF Faces RC
- Built on top of JSF APIs
- Deployable on any 1.2 implementation of JSF
- Support for pop-ups and dialogs
- ADF model support out-of-the-box
- Data Visualization Tools (DVT) components
 - Charts, Gantt, Pivot, Maps, Hierarchy

Really rich!

ADF Faces RC Features

- Solid development support in JDeveloper
- Changeable “skins”
 - Common look-and-feel characteristics
 - Skin editor in JDev 11.1.2
- Layout management features
- Extensive set of properties
 - Declarative access to application metadata
 - Properties can reference dynamic values using Expression Language
- Template support

Some Components

The screenshot displays a web application interface with several ADF Faces components highlighted in yellow boxes:

- af:inputText**: A text input field containing the value "198".
- af:commandButton**: A button labeled "Last".
- af:inputListofValues**: A dropdown menu for "Department" with the value "50".
- af:menuItem**: A menu with items "Using the application" and "About TUHRA".
- af:inputDate**: A date picker showing "6/21/1999".
- af:selectOneChoice**: A dropdown menu for "* Job" with "Shipping Clerk" selected.
- af:selectBooleanCheckbox**: A checkbox labeled "I Love JDev 11g" which is checked.

Other visible UI elements include a "Search and Select: Department" dialog box, a calendar, and a list of job titles.

Sample ADF Faces Development

ADF Faces JSF Snippet

```
<jsp:root xmlns:jsp="http://java.sun.com/JSP/Page" version="2.0"
  xmlns:f="http://java.sun.com/jsf/core"
  xmlns:af="http://xmlns.oracle.com/adf/faces/rich">
  ...
  <af:panelStretchLayout styleClass="AFVisualRoot" topHeight="105px"
    bottomHeight="20px">
    <f:facet name="top">
      <af:panelBorderLayout>
        <f:facet name="start">
          <af:image source="/images/tuhra.gif" shortDesc="TUHRA Logo"/>
        </f:facet>
        <f:facet name="end">
          <af:panelGroupLayout layout="horizontal" halign="right"
            valign="bottom">
            <af:commandImageLink text="Logon" shortDesc="Logout from TUHRA"
              depressedIcon="/images/groupdisconnect_dwn.png"
              disabledIcon="/images/groupdisconnect_dis.png"
              hoverIcon="/images/groupdisconnect_ovr.png"
              icon="/images/groupdisconnect_ena.png"
              disabled="true"
              rendered="#{attrs.anonymous}"/>
            <af:commandImageLink text="Logoff" shortDesc="Logout from TUHRA"
              depressedIcon="/images/groupdisconnect_dwn.png"
              disabledIcon="/images/groupdisconnect_dis.png"
              hoverIcon="/images/groupdisconnect_ovr.png"
              icon="/images/groupdisconnect_ena.png"
              disabled="true"
              rendered="#{!attrs.anonymous}"/>
          </af:panelGroupLayout>
        </f:facet>
      </af:panelBorderLayout>
    </f:facet>
  </af:panelStretchLayout>
</jsp:root>
```

AJAX in ADF Faces RC

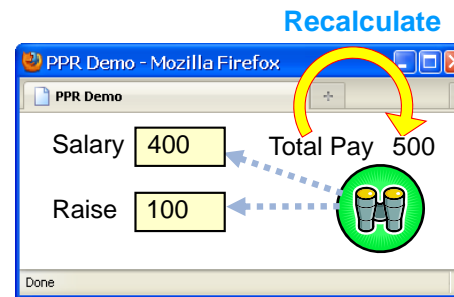

- **A**synchronous **J**avaScript and **X**ML
- **P**artial **P**age **R**endering (PPR) in ADF Faces
 - “Declarative AJAX”
- Much AJAX in ADF Faces is transparent
 - Built into the components
 - Nothing special needs to be done
- You can setup non-default AJAX behavior using properties
 - *partialSubmit* – used by command items
 - *autoSubmit* – used by input items/lists, etc.
 - *partialTriggers* – all components, sets up the “viewer” (listener)

AJAX provides a cleaner user interface!

AJAX Interactions – Total Pay

| | |
|-------------------|---|
| Id | Raise |
| Value | <code>#{bindings.Raise.inputValue}</code> |
| AutoSubmit | true |

| | |
|-------------------|--|
| Id | Salary |
| Value | <code>#{bindings.Salary.inputValue}</code> |
| AutoSubmit | true |

| | |
|------------------------|--|
| Id | TotalPay |
| Value | <code>#{bindings.Salary.inputValue + bindings.Raise.inputValue}</code> |
| AutoSubmit | false |
| partialTriggers | Salary Raise |

Agenda

- What is ADF and Fusion?

- ADF core technologies

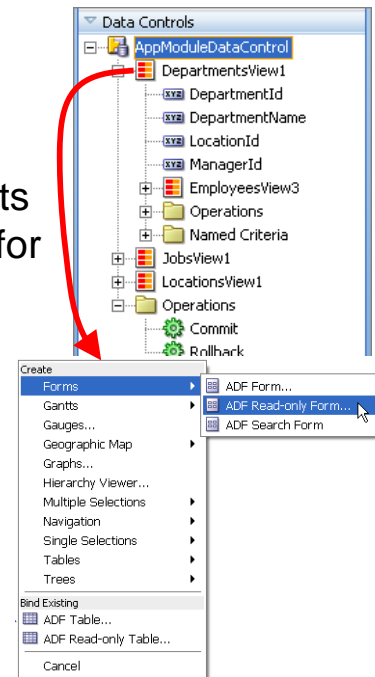

- ADF BC
- ADF Faces
- ADF Model
- ADF Controller

- Required languages

ADF Model

- ADF Data Controls
 - Provides list of components or groups of components for a node in the data model
 - “Drop as” options
- ADF Bindings
 - Prebuilt connection from the ADF BC to the UI
 - Drag and drop action above does the work

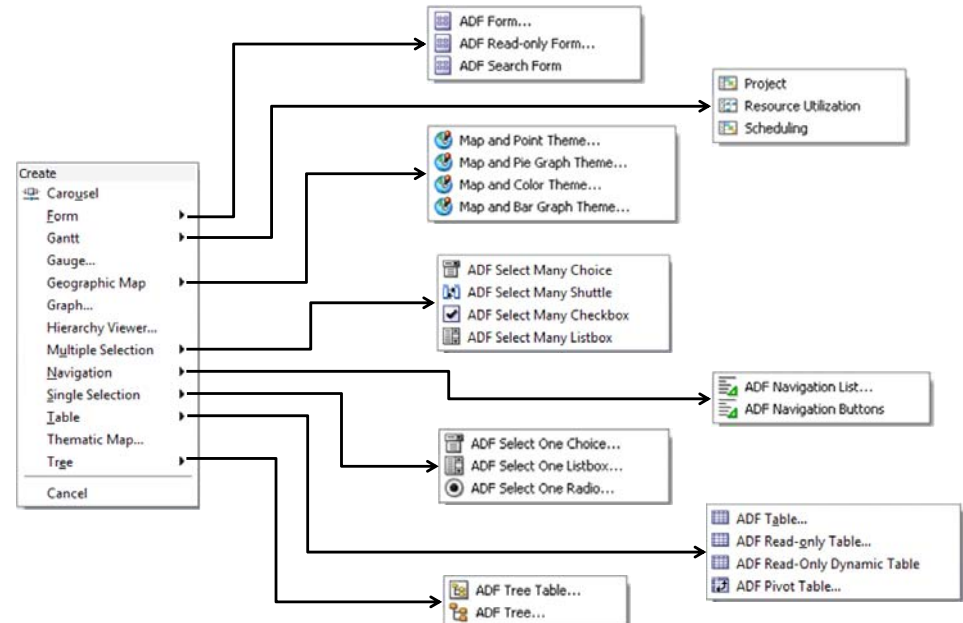

ADF Data Controls

- Business Services abstraction
 - Makes Model components available to ViewController
 - Automatically created with ADF BC
 - Can be created for other business services
 - For non-ADF BC, defined in DataControls.cpx
- Provide list of “Drop as” options that create pre-bound components
 - Collection level (view object instance)
 - Attribute level (view attribute)

The Good News: You don't normally write data controls

Collection “Drop As” Options

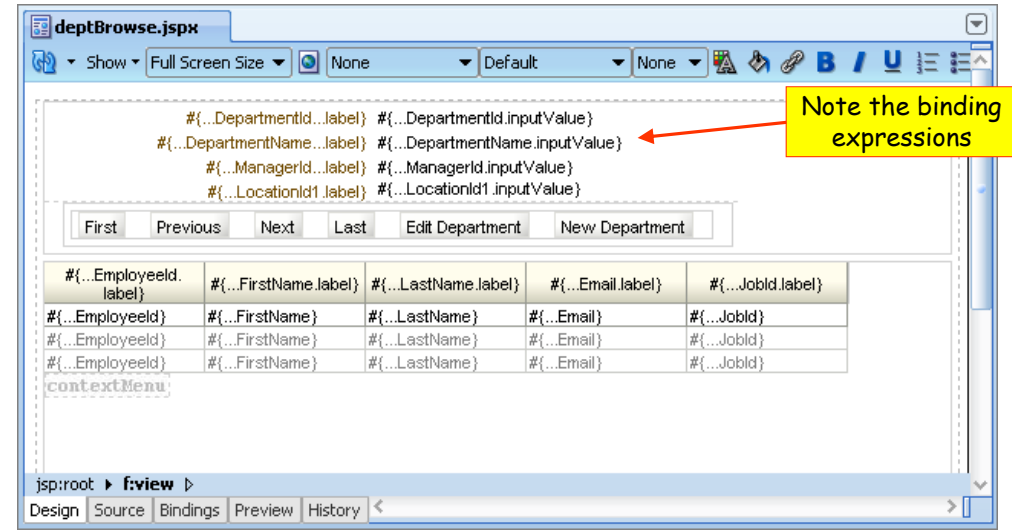

ADF Bindings

More about bindings in the 2 PM session

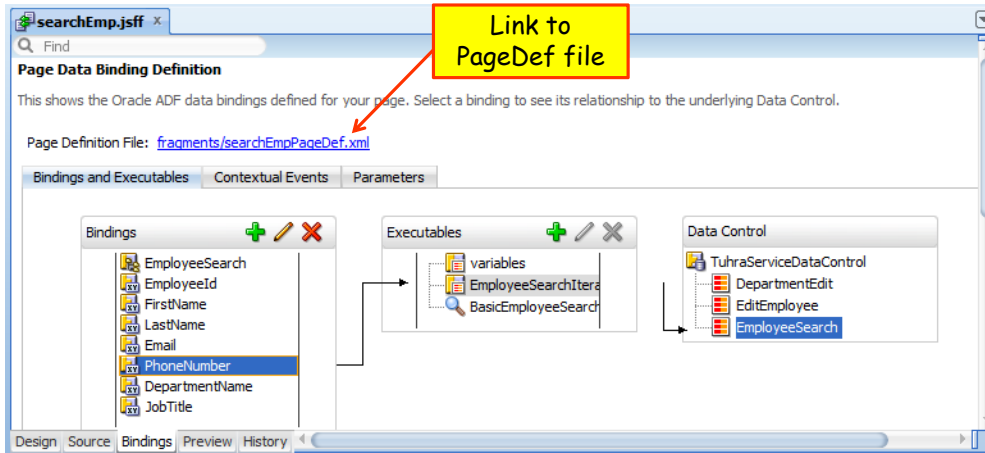

- Association of a business service data element or action with a UI component
 - Relatively automatic in Oracle Forms
 - Definitely not automatic in native Java EE
- Binding normally takes a lot of coding
 - One-off solution is not the answer
 - Need a framework to assist

Drop As Examples: Form and Table

Editing Bindings

Binding Code

JSF Page Snippet

```
<af:inputText value="#{bindings.DepartmentId.inputValue}"
              label="#{bindings.DepartmentId.hints.label}"
              required="#{bindings.DepartmentId.hints.mandatory}"
              columns="#{bindings.DepartmentId.hints.displayWidth}"
              maxLength="#{bindings.DepartmentId.hints.precision}"
              shortDesc="#{bindings.DepartmentId.hints.tooltip}"
              id="it1">
</af:inputText>
```

Bindings (PageDef) Snippet

```
<bindings>
  <attributeValues IterBinding="DepartmentsView1Iterator"
                  id="DepartmentId">
    <AttrNames>
      <Item Value="DepartmentId"/>
    </AttrNames>
  </attributeValues>
```

Agenda

- What is ADF and Fusion?

- ADF core technologies

- ADF BC
- ADF Faces
- ADF Model
- ADF Controller

- Required languages

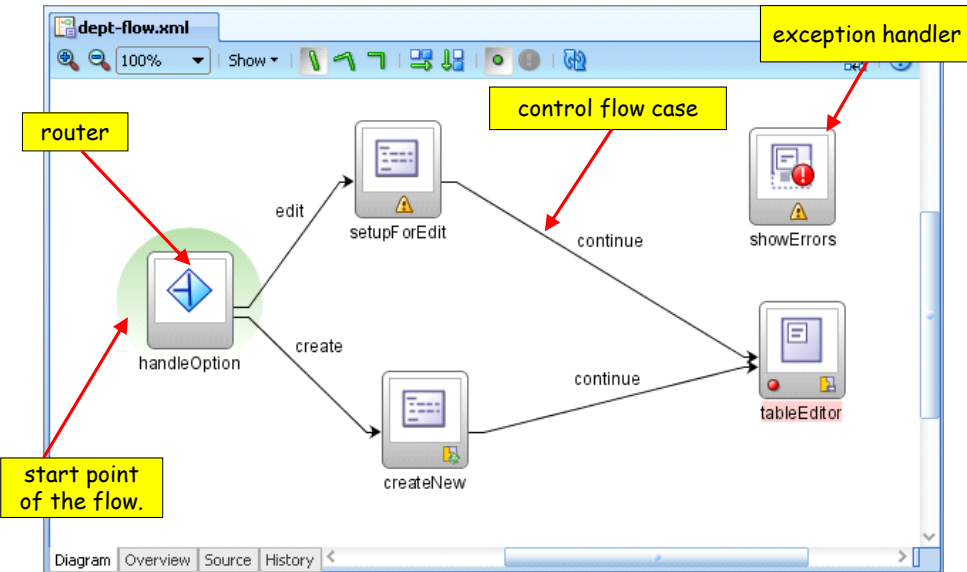

ADF Controller (ADFc)

- Extension to standard JSF Controller functionality
- Defines *task flows*
 - Logic and page fragment components
 - Embedded on the page in a region component
- Benefits
 - Page fragment re-use
 - Executing code in a logic-defined flow
 - “Task flow” not “page flow”
 - Security
 - Exception handling and transaction management
- Defined in a diagram
 - Like JSF but more components available

Sample ADF Controller Development

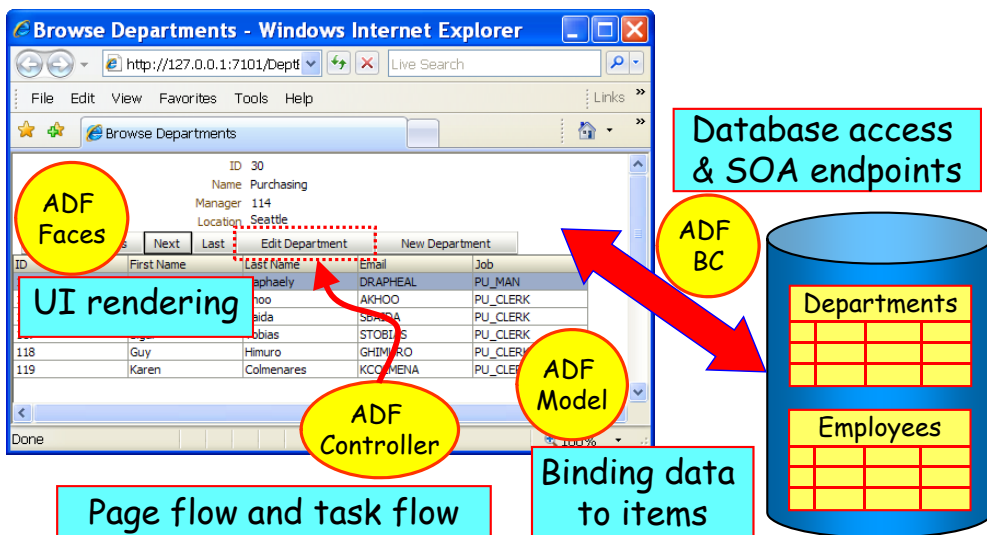

Sample ADF Controller Code

```
<task-flow-definition id="dept-flow">
<default-activity>deptBrowse</default-activity>
<view id="deptBrowse">
  <page>/deptBrowse.jsp</page>
</view>
<view id="deptEdit">
  <page>/deptEdit.jsp</page>
</view>
<control-flow-rule>
  <from-activity-id>deptBrowse</from-activity-id>
  <control-flow-case>
    <from-outcome>toEdit</from-outcome>
    <to-activity-id>deptEdit</to-activity-id>
  </control-flow-case>
</control-flow-rule>
<router id="checkForExplicitID">
  <case id="_6">
    <expression>#{!empty pageFlowScope.employeeId}</expression>
    <outcome>byId</outcome>
  </case>
  <default-outcome>currentUser</default-outcome>
</router>
<method-call id="queryEmployeeById">
  <method>#{bindings.queryEmployeeById.execute}</method>
  <outcome>
    <fixed-outcome>queryEmployeeById</fixed-outcome>
  </outcome>
</method-call>
```

Summary: ADF Core Technologies

Agenda

- What is ADF and Fusion?
- ADF core technologies
- Required languages

Which Languages Do You Use?

1. Java
 - All important programmatic code
 - Think “trigger code” as in Forms
2. XML
 - The components rely on XML
 - Property editors create it for you
3. JavaScript and Cascading Style Sheets
 - Add functionality to HTML pages
 - Usually the components do this work for you
4. Expression Language
 - Used in JSF binding properties
5. Groovy
 - ADF BC scripting

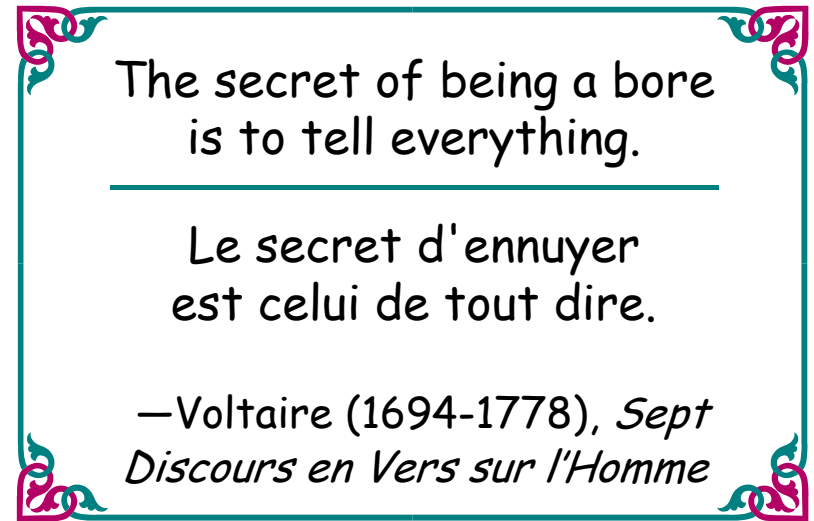

How Much of Each Do You Use?

| Language (Use) | Level Needed | Primary Use |
|---|--------------------|--|
| Java (frameworks such as ADF Faces) | Basic | Business components code for validation and special handling of model objects, as well as coding conditional page flow. |
| Java (extending framework features) | Expert | Supplementing or replacing functionality supplied by the framework. This requires research into the framework's capabilities and architecture. |
| XML | Basic | The JSF tags and the HTML renderer take care of the HTML for you. XML is used for JSF JSP files |
| JavaScript | Basic/None | Providing customized user interaction functionality, for example, special handling of a checkbox selection. |
| Cascading Style Sheets | Basic/None | For ensuring a consistent look and feel. If you use prebuilt look-and-feel templates, no CSS coding is needed. |
| Expression Language | Basic/Intermediate | Supplying data to components from properties or methods in the application. |
| Groovy | Basic | Expressions for ADF Business Components |

Shameless Book Plugs

Final Voltaire Wisdom

Summary

- Fusion is Oracle's effort to merge application products and technologies
- Oracle uses the "Fusion Technology Stack" and ADF to build Fusion Applications
- ADF offers a consistent developer experience regardless of the technologies
- **ADF Business Components** provide access to the database and other data sources
- **ADF Faces** provide 150+, feature-rich item and container components for JSF JSP pages
- **ADF Model** connects ADF BC to ADF Faces
- **ADF Controller** manages page flow and task flow

- Books co-authored with Dr. Paul Dorsey, Avrom Roy-Faderman, & Duncan Mills

www.quovera.com
