Weaning (white card = new animals)  
(pups into new cage)

1. Place animals into the new cage with food, water, gel and a gel/toggle sign (if in auto-water facility).

2. Toggle the cage in the toggle station (if auto-water or hydropac)

3. Write *today's date* and *number of animals* on the top tear-off strip (activation strip)

4. Place cage card on cage with bar code visible.

5. Place the tear-off (activation) strip into the envelope marked “tear-off strip” on the back of the room door.

You can record the source cage location in the body of the card for your information.

If DCM husbandry staff has to wean animals they will write their initials and the time taken on the back. The study team will be charged for the service.
