Separation (splitting) of Mice (yellow cards = existing mice)

1. Place animals into the new cage

2. Toggle the cage in the toggle station (if autowater or hydropac)

3. Write today’s date, the cage card number from the source cage and the number of animals being removed from the source cage, on the top tear-off strip (activation strip). Repeat as needed. If animals come from more than one source cage, use the back of the strip to record the information to allow you more space to write

4. Place cage card on cage with barcode visible.

5. Place tear-off activation strip into the envelope marked “tear-off strip”
