

Another important feature of Vidalyze is the ability to measure the angle of a point. This is especially helpful when analyzing golf swings or tennis serves. After completing this tutorial, you will learn how to measure angles while doing video analysis using Vidalyze.

Step 1: Here you can see that we have already a video setup. Refer to the tutorial about **Side by Side Analysis** on how to do this. Now all you need to do is to click on the **Angle Tool** to start measuring the angle of a point.

Step 2: Now you can drag and measure the points where you want your angle to appear and move it freely wherever you want to measure different angles from the video.

Step 3: You can also create boxes, circle, lines and even change colors using the tools above your screen.
