

Now let's move on to the absolute best feature of Vidalyze - analyzing videos side by side. This is the most exciting part of Vidalyze and this tutorial teaches you how to perform a side by side video analysis using this app.

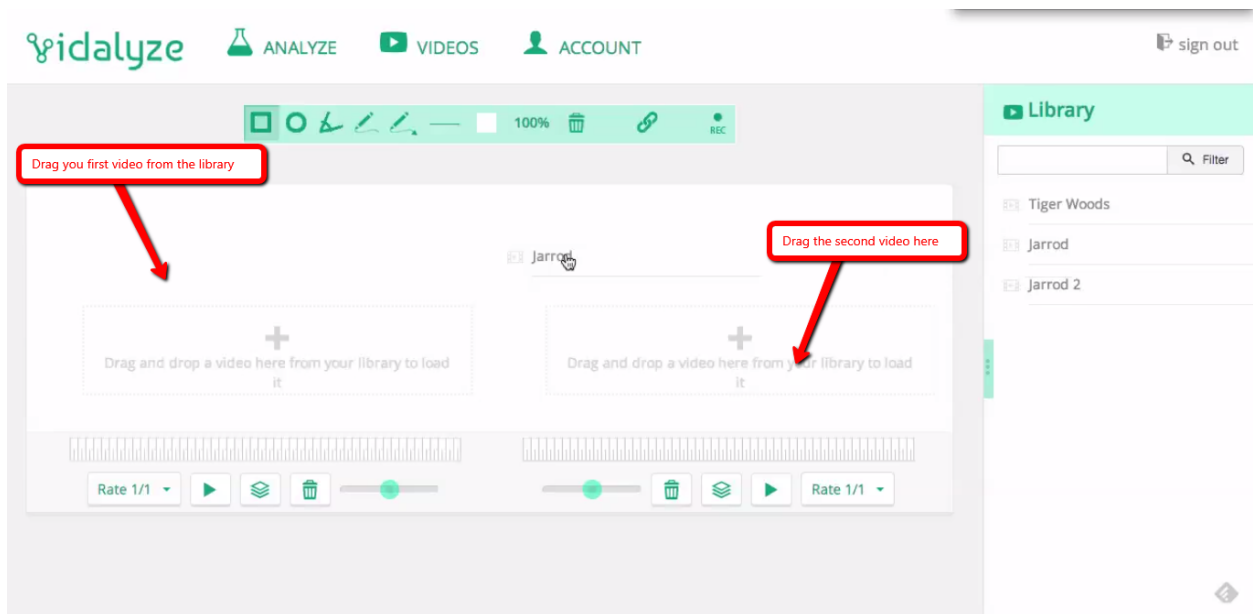

Step 1: Click on **Analyze**, this is where all of the action happens.

Step 2: Next, you have to import your videos from your device. Once you've done that, you can see all imported videos appear in the **Library**. You can hide the library by clicking the hide button (three dots) in the middle.

Step 3: Drag your first video from the **Library** to the first box in the staging area, and the second video to the other box on the right.

Step 4: Now that you've added your videos. You can see at the bottom all the playback controls where you can play and analyze your videos or even enable frame-by-frame controls to make the best possible video analysis.
