

Global Sustainability Activities: Post-Program

Activity 3: Circular Economy Worksheet

Think of a product that you often throw away or even put in the recycling bin. How could that product be taken apart and reused for its parts? What kind of new product could come from those repurposed parts? How do you see the company reusing this waste, as well as you yourself saving money?

In the box labeled “Product #1” put in the product that you thought of. In the box “Product #2” put in a product that you think could be made from some or even all of the parts of the first product.
